

VMware Partner University Mobile (VMware-PUM)

AT A GLANCE:

The VMware Partner University Mobile app is VMware's updated, partner specific, tablet and phone-based application that provides partners with their e-Learning and enablement tools and content in a single mobile application. The secure portal requires login using your existing VMware Partner Central credentials and is available for both iOS and Android platforms. The application continues to provide your e-Learning training in either an online or offline manner, as well as providing enablement tools like Partner mToolBooks, Sales Bytes and Launch Playbooks and review previous VMware event presentations and vmLIVE recordings. Using the VMware Partner University Mobile app, you're able to learn where, when and how you want to.

Overview

With mobile-optimized training, VMware is making it easier than ever for partners to be successful selling, designing, deploying and supporting VMware solutions. Leverage the VMware Partner University Mobile app to access content on your iOS or Android device and conveniently stay up-to-date on product training, sales and technical accreditations, or the latest solution enhancements.

To simplify content search, the training is categorized by VMware Solution Competency:

- Business Continuity
- Cloud Infrastructure as a Service
- Desktop Virtualization
- Hybrid Cloud
- Infrastructure Virtualization
- Management
- Virtualization of Business-Critical Applications

Figure 2 - Solution Area Tile

By leveraging a native mobile application rather than a device-based web browser, you have the ability to not only view, but also download content to your device. Take advantage of this capability for offline viewing at your convenience when you may be without internet access, such as a plane flight.

Whether you view the training content online or download, you still must visit Partner University to complete any tests associated with the training to earn credit, including sales or technical accreditations.

How to Access

Once you download the application, review the Quick Tour for how to leverage all aspects of the app. From there, you can get started in two easy steps (See figure 3):

1. Select your Location & Role
2. Then sign-in with you existing Partner Central credentials

NEW VMware Partner Mobile Knowledge Portal app Now Available!

Content Security

The VMware Partner University Mobile app is a secure partner site within the public application and requires login using VMware Partner Central account credentials. If you need to create a Partner Central account, [click here](#).

If content has been downloaded from the application to a mobile device, an additional security feature requires reconnection to the VMware-PUM every four weeks to maintain the offline content. If you do not reconnect after four weeks the existing offline content on the device is destroyed per VMware security policy. You will be able to log back into the VMware-PUM to reload any content that may have been removed due to this policy.

Visit Partner University to Get Training Credit

While the VMware-PUM allows for mobile and offline content access, don't miss the opportunity to get credit for your training. Most accreditations and certifications require some completion. After taking mobile training, you must login to VMware's Partner University to complete any final requirements, such as leveraging the course test-out option, in order to earn your accreditation/badge.

VMware-PUM replaces VMware PMKP for Partner Content

If you already have the VMware Mobile Knowledge Portal app you can still leverage that for the great public content it provides. For all partner content you will need to download the new VMware-PUM app from the app store.
