VMware Fusion for Mac
Mac Virtualization for Everyone

VMware Fusion makes it simple to run Windows on your Mac. With a common underlying hypervisor, it's easy to run VMs from the command line or script, and control and manage both virtual machines and physical hosts. Fusion lets you migrate to an existing PC or even install macOS Sierra from a download or recovery partition. Powerful way to install multiple operating systems on your Mac.

VMware Fusion Pro and VMware Workstation are secure desktop virtualization platforms. VMware Fusion lets you build your virtual environments and test the end-to-end experience. With a common underlying hypervisor, it's easy to run VMs from the command line or script, and control and manage both virtual machines and physical hosts.
