

Horizon Flex, Fusion and Workstation offer unparalleled agility, productivity and security

for delivering corporate desktops and legacy applications to laptops, even when offline.

Agility

Run Windows on a Mac (without rebooting)

Now you can continue running the Windows applications you can't live without on the laptop you love, side-by-side, sharing files and system resources with your Mac applications, **fast and reliably**.

Run Linux on Windows or Mac (without rebooting)

The ability to run a second operating system is **perfect for those that refuse to compromise**. VMware gives you side-by-side access to Linux (and 500 other supported OS*) applications from either your Mac or your Windows PC and tablet. You can even turn that upside down, and put Windows (et al) on your Linux machine.

Reduce Laptop Management Costs

Reduce both the **CapEx and OpEx costs** associated with operating remote laptops with centrally controlled, cloud deployed, local virtual desktops. Easily reclaim software licenses when decommissioning BYOPC workers.

Eliminate Laptop Provisioning Costs

Increase **employee productivity** by remotely enabling and refreshing virtual desktops for remote offices and mobile workers with no downtime.

Productivity

Embrace the BYOPC Culture

Rapidly enable workers with standardized corporate desktops running on user-owned Macs and PCs, policy secured and Active Directory authorized.

Extend the Life of Legacy Applications.

Deploy **mission-critical, legacy applications** on modern hardware while taking advantage of compliance and security technologies available for the latest host operating systems.

Focus on the Application That Matters.

Seamlessly access applications from multiple operating systems on separate monitors (even Retina), desktops or side-by-side.

Access Desktops From Anywhere, Even Offline.

For road-warriors and offshore development, virtual machines are a better way of securely delivering a local desktop that doesn't rely on a fast network connection.

Security

Enforce Time-based Restrictions

Create time-bound, encrypted, local virtual desktops that auto-expire and can even remove themselves from remote machines.

Enforce Desktop Isolation

Force separation of personal and work-related files by isolating the virtual hard disk from the physical, controlling copy & paste and restricting drag & drop.

Restrict External Device Access

Policy enforce the use of USB memory cards, flash drives, video cameras and any other 3rd party devices plugged into a laptop.

Stable and Mature Platform

Built on 15 years of virtualization excellence, and winner of more than 50 industry awards, VMware Workstation and Fusion products provide the most stable and secure desktop virtualization platform in the industry.

Backed by World Class Support and a Global Community

VMware offers world-class 24x7 support in a variety of packages to suite your needs: ranging from free to full SLA backed phone support, coupled with an extensive and active community ready to help.

Millions of Satisfied Customers

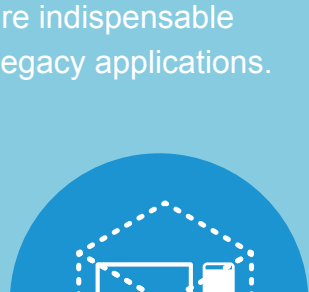

The enterprise community agrees; Workstation and Fusion are indispensable tools when delivering offline corporate desktops or supporting legacy applications.
