Looking for new strategic ways to respond to the growing business demands on your IT? Need to deliver a more agile IT environment without over or under provisioning while still controlling costs?

One of the most pressing issues facing IT organizations stems from the time, effort, and costs associated with responding to changing business needs.

Caught between shrinking resources and growing business needs, organizations are looking to cloud computing to provide a more agile, effective, and cost-effective model for computing.

A cloud for every organization
The same benefits and IT efficiencies you deliver in your own VMware® virtualized data center can now be extended to the Dell™ Cloud.

Together, Dell and VMware are changing the way you deliver IT services. Public, private/hybrid cloud - which works best for your business? Dell Services can help match your business needs to the right technologies.

Dell™ Cloud with VMware® vCloud™ Datacenter Service

Enterprise class secure public cloud
Looking for new strategic ways to respond to the growing business demands on your IT? Need to deliver a more agile IT environment without over or under provisioning while still controlling costs?

Driving business agility and end user satisfaction
Dell Cloud with VMware vCloud Datacenter Service is enterprise-class Infrastructure-as-a-Service (IaaS) hosted in a secure Dell data center. This service provides access to vCPUs, memory, storage networks, IP addresses, firewalls, catalog capabilities, and additional services.

Pooling of servers, networks, and storage increases agility, reducing the time and CAPEX needed to stand-up and maintain traditional physical environments. On-demand capacity allows you to quickly respond to new business opportunities, seasonal/cyclical trends, and other fluctuations in the need for compute capacity. Mobile users have anytime access from multiple devices; shorter Service Level Agreements (SLAs) improve the satisfaction of your end users.

Realize the benefits
Leverage your current investments in VMware virtualization as you evolve your business to benefit from cloud computing. Our cloud solutions provide the software, hardware, and services enabling your organization to transition existing VMware virtualized workloads to the cloud.

• Secure and compliant. Common cloud infrastructures lack the inherent security required by enterprises, leaving them vulnerable. Dell Cloud with VMware vCloud Datacenter Service offers a complete framework with multiple layers of virtual and physical security, and a complete framework for securing networks, applications, data, and endpoints in a highly secured Dell data center. In addition, Dell SecureWorks™ active monitoring delivers information security services powered by proprietary technology for global threat visibility.

• Open and interoperable. The Dell Cloud with VMware vCloud Datacenter Service is built using a common management platform based on open, industry cloud standards. Use of the same VMware technology across private and public cloud creates a compatible ’Virtual Data Center’ enabling application portability across clouds.

• Familiar and compatible. Unlike commodity public cloud services, the Dell Cloud with VMware vCloud Datacenter Service provides the control of all resources through a familiar and compatible user interface. This helps you to manage, provision, and release IT resources for private, public, or hybrid cloud without having to retrain your IT staff.

• Available and reliable. The Dell Cloud with VMware vCloud Datacenter Service is built with the necessary redundancy and ruggedness for optimal availability and endurable reliability. The comprehensive infrastructure management layer monitors the dynamic pools of hardware, software, storage, and network resources, thereby providing automated fail-over and enabling business continuity.
