

EMC Solutions for Microsoft Exchange in a Virtual Environment

Business Challenges

Microsoft Exchange Server 2007 is a mission-critical application that enables successful employee productivity. It must be efficiently and effectively maintained as any outage or upset in performance can greatly impact employee collaboration and business operations.

Every day, you are challenged with addressing the complexity and cost associated with Exchange data growth, increasing user workloads, inefficient IT utilization, and decreasing and/or limited budgets—and you still need to ensure Exchange availability and recovery SLAs are attained.

Solution Description

A consolidated Microsoft Exchange infrastructure is the first step toward meeting the challenges of managing e-mail. Deploying Exchange with VMware[®] is also part of the successful journey as virtualization is becoming even more crucial in today's lean IT organizations.

EMC empowers businesses of all sizes to address their most pressing challenges. EMC[®] solutions are backed by rigorous validation and testing in real-world Microsoft Exchange 2007 environments. EMC validates solutions that embrace EMC technologies plus VMware and Microsoft technologies.

EMC Solutions for Microsoft Exchange 2007 deployed with VMware include:

EMC Consolidation Solutions for Microsoft Exchange 2007

EMC has validated reference architectures in virtual environments that leverage virtual technologies to deliver high availability and performance while also addressing the ability to scale effectively to support future needs.

EMC Backup Solutions for Microsoft Exchange 2007

EMC has developed best practices to enable our customers to leverage industry-leading technologies. EMC's proven approach to solutions offers customers a breadth of deployment options including Microsoft LCR and more advanced options such as EMC Replication Manager to help protect your Exchange environment deployed in virtualized environments.

EMC Archive Solutions for Microsoft Exchange 2007

EMC delivers e-mail management capabilities to help organizations improve the operational efficiency of their messaging environments, reduce the cost and risk of legal discovery, and automate e-mail retention and disposal policies to meet regulatory and corporate governance requirements.

EMC Protect for Microsoft Exchange 2007

EMC solutions can also help you deploy cost-effective disaster recovery environments for Exchange utilizing VMware infrastructure. EMC and VMware enable you to implement a disaster recovery solution that allows your production application server to be recovered after failure, without the requirement of having an exact replica of your production environment. Additionally, EMC has validated how to use Microsoft technologies such as Microsoft Data Protection Manager (DPM). EMC's messaging protection solution is designed specifically to help keep your Exchange environment running 24x7.

EMC provides a simpler way for you to gain even more benefits from your investments in Microsoft Exchange and VMware by offering a proven, simpler, more cost-effective approach to managing your Exchange environment. No other provider helps you put the potential of VMware into practice as confidently and as expertly as EMC.
