Seamless user experience, comprehensive management – Deliver virtual workspaces from the mobility and virtualization market leader

VMware Workspace™ Suite is a comprehensive virtual workspaces solution combining application, device, and data management with centralized identity management, and common policy enforcement to empower anytime/anywhere workers, transform workflows, and enable bring-your-own-anything initiatives.

VMware Workspace Suite combines AirWatch® Enterprise Mobility Management, Horizon® 6 virtual and physical app and desktop virtualization, and Content Locker on top of the Workspace identity and policy engine. Workspace Suite is now packaged as a soft bundle with simple per-user pricing for on-premises deployment, making it easier than ever before to sell the complete virtual workspaces vision with the strength of VMware and AirWatch.

Customer FAQ

Q. What is VMware Workspace Suite?
A. The suite is a single solution that provides you a “soft bundle” that includes the existing Horizon 6 Enterprise product + the AirWatch Yellow management suite sold for one simple, per-user discounted price with a single bundle SKU and a single SKU for Support and Subscriptions (SnS).

Q. What is in VMware Workspace Suite?
A. Here are the major components of Workspace Suite:
   - AirWatch Management Suite for enterprise mobility management
   - Horizon 6 Enterprise Edition for virtual and physical Windows app and desktop management
   - Horizon FLEX™ for containerized virtual desktops
   - Content Locker for Enterprise File Sync and Share
   - Workspace that integrates across the stack for an enterprise app store, launcher and SSO and identity engine

Q. What is new in Workspace Suite?
A. We have included new capabilities to be part of Workspace Suite:
   - Horizon FLEX – Provides IT the flexibility to securely serve BYO users, Mac users, contractors and road warriors
   - AirWatch Laptop Management – Management of Mac OS and Windows laptops

Q. How is Workspace Suite Licensed?
A. The VMware Workspace Suite is a per-user perpetual license for the on-premise versions of the underlying products.

Q. What is the device limitation for Workspace Suite?
A. Each user under the per-user license model may enroll up to 3 devices for use with the AirWatch management suite. This license follows the user, not the device. The restriction only affects the AirWatch management product. Named users may access apps or data through the Workspace portal from any number of additional non-enrolled devices with no restrictions.

Q. What versions of Horizon 6 and AirWatch are included in VMware Workspace Suite?
A. VMware Workspace Suite licenses are versionless. Customers will be entitled to the underlying Horizon 6 and AirWatch product versions as available and entitled at time of purchase or through the length of the service and support agreement for updates.

Q. Will the Suite be licensed on a concurrent basis?
A. There are no plans to offer Workspace Suite on a concurrent basis. Concurrency is generally not applicable to data or mobile management products as the software is essentially in use “all the time.” Use cases that leverage low rates of concurrency such as student populations or who leverage a small number of mobile devices shared among many users should take advantage of mixed licensing models that permit both concurrency for Horizon 6 and per-device licensing for AirWatch.
