

VMware Infrastructure with Lab Manager Jumpstart

Overview

Customers and partners of VMware Infrastructure (VI) can learn more about its use for software development, testing, and support. We provide knowledge transfer on VI and demonstrate use of VMware Lab Manager in conjunction. Participants will learn how to improve productivity, consistency, and speed of the software development cycle through virtualization.

Deliverables

- Interactive proof-of-concept workshop on virtual infrastructure and its use for software development and testing
- Guided tour of VMware Lab Manager and VMware Infrastructure capabilities
- Installation and configuration of a standard installation
- Best practices guidance on setup, and operations of VMware Infrastructure for software test labs

Target Audience

Customers and partners of VI, who want the benefits of virtualization for the software development cycle. Companies whose core business is software development, those who provide development and testing and consulting services, and IT groups involved in software development and testing are part of this audience. Development, quality assurance, production operations, and IT staff responsible for system architecture, storage, network, servers and services management would be interested in this offering.

Requirements

- Server hardware for VMware Infrastructure and Lab Manager
- Minimum of 60 GB local free disk space. Supported NAS, iSCSI or SAN storage
- Conference room with projector and networked computers running MS Windows 2000 or higher
