

VMware View Manager Jumpstart

Overview

For IT professionals who want to centrally manage and deploy virtual desktops and who are familiar with VMware vSphere™, VMware View™ Manager is the connection broker that enables IT to centrally administer virtual desktops for end-users on VMware vSphere. VMware View Manager provides secure access to desktop resources, and dynamically and efficiently allocates virtual desktops to end-users. In this workshop we describe the benefits and architectural considerations for virtual desktops, and demonstrate installation and use of VMware View Manager in a proof-of-concept setting.

Deliverables

- On-site installation and guided tour of VMware View Manager.
- Knowledge transfer of best practices for virtual desktop infrastructure architecture, networking, and security.
- Proof-of-concept environment installed and configured.

Benefits

- Learn how to create desktop templates, and how to centrally provision and manage virtual desktops
- Understand security, networking, and datacenter configuration required to implement virtual desktops
- See the benefits and cost savings obtained by using a connection-broker for managing virtual desktops

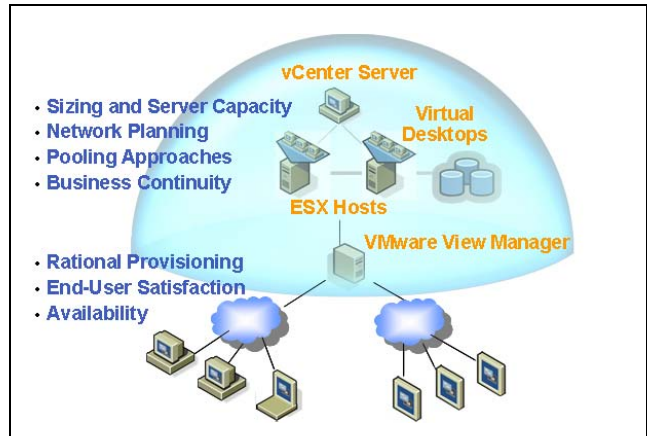

Target Audience

Customers and partners who are already using VMware vSphere, and who want deliver virtual desktops to end-users. Companies who want to improve IT administrative costs for managing desktop resources while maintaining end-user satisfaction, data security, system availability and performance.

Roles and Responsibilities

- VMware Certified Professional Consultant: Conducts workshop, provides best practices and knowledge transfer about configuration and management of VMware vSphere and VMware View Manager.
- Workshop Participants: IT staff responsible for end-user support, desktop resources, architecture, storage, network, servers and services management.

Professional Services Best Practices
