# EMPLOYERS Launches a Full Migration to the Cloud

EMPLOYERS provides workers' compensation insurance to small businesses through a wide network of agents. To serve agents better and gain advanced data analytics capabilities, the company chose to modernize its IT infrastructure and applications by migrating 100 percent of its workloads from an aging data center to the cloud. Because it can't afford to slow down in its competitive industry, EMPLOYERS chose VMware solutions to rapidly transition to a multi-cloud environment, working with VMware Professional Services to migrate its disaster recovery (DR) environment with minimal business impact.

## Business needs

- Replace an aging data center with a nimble IT and application infrastructure
- Modernize applications to make it easier for agents to work with the company
- Transform insurance services using advanced data analytics

## Impact

- Migrated Dev and QA environments to the cloud in seven months
- Shortened development cycle from nine months to two weeks
- Migrated hundreds of applications with zero impact on performance

## INDUSTRY

Financial Services

## HEADQUARTERS

Reno, Nevada

“We chose a multi-cloud strategy so we could match the right cloud with the right technology. VMware Cloud on AWS gave us the ability to move quickly into the cloud without getting locked into a particular platform.”

JEFF SHAW  
EXECUTIVE VICE PRESIDENT  
AND CIO, EMPLOYERS

## STRATEGIC IT PRIORITIES

Multi-cloud

## VMWARE FOOTPRINT

VMware Cloud™ on AWS  
VMware HCX®
