Deploy and Consume NSX ALB on Horizon Single Site

At a glance
The primary objective of this service is design and implement an Application Delivery Controller (ADC) solution based on NSX ALB limited to the minimum design and configuration required to load balance VMware Horizon at a single site.

The service is conducted jointly with your team members to enhance the learning experience during the deployment.

Key Benefits
- Deploy a best practice-based, foundational VMware NSX ALB implementation
- Develop key skills to be able to support a load balancer for desktop virtualization environments
- Improve operational efficiency and network provisioning time, and increase network security

Project Scope
The scope of the service includes the following:
Deploy and Consume NSX Advanced Load Balancer on Horizon single site (REMOTE ONLY) design and implements an Application Delivery Controller (ADC) solution based on NSX ALB limited to the minimum design and configuration required to load balance VMware Horizon at a single site.

<table>

Outcomes
Customer will be able to accomplish the following outcomes after the project:

- Plan and extend load balancing deployments to support a single-site desktop virtualization environment
- Improve operational efficiency
- Improve utilization of assets
- Improved insight into application component communication
- Map role and skill set definitions to support the IT transformation

Estimated Schedule
VMware estimates that the duration of this project will not exceed two (2) weeks. VMware consulting services will be performed according to a schedule agreed to by both parties. Typically, consulting services are performed during normal business hours and workdays.

Project Activities
The activities for this engagement are organized in the following phases:

- Phase 1: Initiate
- Phase 2: Plan
- Phase 3.1: Execute: Design
- Phase 3.2: Execute: Implement
- Phase 3.3: Execute: Knowledge Transfer
- Phase 4: Close

Phase 1: Initiate
The VMware Project Manager hosts one (1) project initiation call with key Customer and VMware stakeholders. Topics to be discussed include the following:

- Project business drivers, scope, and objectives.
- Project deadlines, estimated timelines, scheduling, and logistics.
- Identification of key Customer team members with whom VMware will work to perform the tasks defined in this SOW.
• Participating team members are confirmed, and contact details are exchanged to schedule the project kickoff meeting.

Deliverables
• One (1) project initiation call

Phase 2 Plan
VMware leads one (1) project kickoff meeting with Customer project sponsors and stakeholders to review expectations about the purpose of the engagement, the delivery approach, and estimated timelines. The following are the objectives of the meeting:
• Introducing the VMware team, roles, and responsibilities.
• Describing the project goals, phases, and key dates.
• Agreeing on communication and reporting process and creating a communications plan.
• Validating the project expectations and clarifying roles and responsibilities
• Confirming prerequisites are met as detailed in the solution checklist for specified solutions.
• Presenting the solution overview for specified solutions including expected project results and deliverables.
• The VMware Project Manager and the Customer Project Manager collaborate to develop the project plan.

Deliverables
• Communications plan
• One (1) project kickoff meeting
• Project Plan
• Solution checklist
• Solution overview presentation

Phase 3: Execute
The key activities for this phase are organized in the following sub-phases:
• Implement
• Knowledge Transfer
Phase 3.1: Execute: Design
VMware leads the Customer project team in a series of workshops to develop a design. VMware does the following:

- Conducts up to twelve (12) hours of design workshops.
- Documents the design for the specified VMware solutions in the solution design document(s).

Deliverables
- Solution design document
- Up to twelve (12) hours of design workshops

Phase 3.2: Execute: Implement
VMware implements the solution according to the VMware solution specification. VMware does the following:

- Implements the specified solutions as detailed in the specification workbooks.
- Verifies the implementation and documents results in the verification workbooks for the specified solutions.

Phase 3.3: Execute: Knowledge Transfer
VMware conducts knowledge transfer sessions covering the design, implementation, and operational considerations relating to the scope of this project. VMware does the following:

- Conducts up to three (3) hours of knowledge transfer sessions for appropriate Customer representatives.
- Provides an adoption guide document(s) containing operational guidance for the specified solutions.

Note: For the avoidance of doubt, the Knowledge transfers herein do not comprise VMware product training or certification courses as offered by the VMware Education unit - (http://mylearn.vmware.com/mgrreg/index.cfm).

Deliverables
- Adoption guide document
- Knowledge transfer workshop presentation
- Up to three (3) hours of knowledge transfer sessions
Phase 4: Close

The VMware Project Manager conducts one (1) closure meeting with Customer covering project status, next steps, and how to engage further with VMware.

Deliverables
Engagement summary presentation
- One (1) closure meeting

Out of Scope

The following are the out-of-scope items for this project.

General
- Installation and configuration of custom or third-party applications and operating systems on deployed virtual machines.
- Operating system administration including the operating system itself or any operating system features or components.
- Management of change to virtual machines, operating systems, custom or third-party applications, databases, and administration of general network changes within Customer control.
- Remediation work associated with any problems resulting from the content, completeness, accuracy, and consistency of any data, materials, or information supplied by Customer.
- Installation or configuration of VMware products not included in the scope of this document.
- Installation and configuration of third-party software or other technical services that are not applicable to VMware components.
- Configuration of VMware products used for the service other than those implemented for the mutually agreed to use cases.
- Customer solution training other than the defined knowledge transfer session.
- Design, deployment, configuration, or migration-related work for NSX ALB (AVI) Global Server Load Balance (GSLB) and/or Web Application Firewall (WAF) components.
Deploy and Consume NSX Advanced Load Balancer on Horizon single site

Prerequisites Checklist

Customer is responsible for executing all items discussed in the Service Checklist prior to arrival of VMware consultants on site.

The participation of the following Customer stakeholders is required for the Service to be performed:

• Desktop operations leads
• VMware operations team leads
• Network Operations team leads
• Network Architecture team leads

The following technical prerequisites are required to enable VMware to perform this Service:

• Horizon servers (connections server, security server, composer server, TrueSSO server) are installed and basic configuration is set. Horizon 7.x or higher.
• Service account with permissions in vCenter.
• NTP must be setup and time verified to be correct.
• DNS must be configured and tested for forward, reverse, short and long name resolution.
• Virtualized CPU required minimum: Enough vCPU capacity must be available to deploy three (3) NSX ALB Controller Nodes and four (4) NSX ALB Service Engines for SLB depending on the deployment model and sizing guidelines.
• Virtualized storage required capacity Minimum: Enough storage capacity must be available to deploy three (3) NSX ALB Controllers and up to four (4) Service Engines for SLB depending on the deployment model and sizing guideline.
• Virtualized RAM required capacity: Enough memory capacity must be available to deploy three (3) NSX ALB Controllers and up to four (4) NSX ALB Service Engines for SLB depending on the deployment model and sizing guidelines.
• Required number of public/private IP addresses must be allocated for NSX ALB components (Controllers/SEs) as well as Virtual Services (UAG/Connection Server/App Volume) depending on the deployment model.
• Required SSL certificates (SAN/Wildcard etc.) must be provided for the NSX ALB virtual services depending on the deployment model.
• Horizon UAG and Connection Servers must be configured to load balance Horizon VDI traffic through NSX ALB.
• DNS servers must be configured for Horizon UAG and Connection Servers.

Terms and conditions

This datasheet is for informational purposes only. VMWARE MAKES NO WARRANTIES, EXPRESS OR IMPLIED, IN THIS DATASHEET. All VMware service engagements are governed by the VMware Professional Services General Terms and Conditions. If you are located in the United States, the VMware contracting entity for the service will be VMware, Inc. If you are outside the United States, the VMware contracting entity will be VMware International Limited.

This service must be delivered and accepted within the first 12 months of purchase, or the service will be forfeited. Pricing for this service excludes travel and other expenses. For detailed pricing, contact your local VMware representative.
