VMware Site Reliability Engineering Services for Cloud Infrastructure

At a glance
VMware Site Reliability Engineering Services for Cloud Infrastructure provide VMware expertise to help create ultra-scalable and highly reliable VMware Cloud Foundation and VMware Cloud Foundation on VxRail environments.

Key benefits
• Improve infrastructure and service reliability and availability
• Increase operational efficiency
• Minimize toil
• Remove configuration drift
• Establish visibility into infrastructure performance and service health
• Address security vulnerabilities

SKUs
For VMware Cloud Foundation and VMware Cloud Foundation on VxRail
Standard: PS-SRE-CI-VCF-STD
Advanced: PS-SRE-CI-VCF-ADV

Service overview
VMware Site Reliability Engineering (SRE) Services for Cloud Infrastructure are agile service offerings which allow a team of VMware Experts to help guide and develop a VMware Cloud Foundation™ or VMware Cloud Foundation on VxRail environment, making sure that the value of the investment is maximized.

From solving business challenges, to helping with common operational tasks such as upgrades, and security hardening, this service will help with the adoption of the technology in the environment. Based on Customer specific use cases identified, it provides continuous value and innovation solving real business problems that are identified.

This service applies to the following VMware products, with vendor-supported versions as agreed to by VMware and Customer at project kickoff, but limited to those that are in general availability (GA) on the date of service purchase:
• VMware Cloud Foundation 4.x (*)
• VMware Cloud Foundation 4.x on VxRail

Note (*): VMware Cloud Foundation+™ subscription activation is required within 60 days of deployment if VMware Cloud Foundation+ licensing is used for the instance.

Service scope
VMware SRE Services are prescriptive agile services which address the different topic areas shown in the table below. Example backlog tasks are shown in Appendix C of this datasheet.

For delivery of prescriptive agile services, VMware will work with Customer’s team to create and prioritize the agile backlog which will be delivered upon. These services assume a fixed team of resources as described in Appendix B which will deliver the identified backlog items.

**Estimated schedule**

VMware SRE services are a 1-year term commitment. VMware Professional Services will be performed during normal VMware business hours and workdays (weekdays and non-holidays) and will be provided in English. Backlog items will be developed in 2-week sprints, 2 sprints per month, for the 12 months of the engagement.

**Deliverables**

The deliverables will be jointly decided with Customer during sprint planning based on Customer prioritization.

In and out of scope items will be subject to the agreed planning construct and subject to available sprint time and to the availability of assigned resources.
Backlog and delivery items may change throughout the engagement as appropriate and will be considered complete as mutually agreed upon based off the individual sprints being planned.

**Out of scope**
The following are out of scope items for this service divided by section.

**General**
Hardware and firmware patches and upgrades are not included.

- Installation and configuration of custom or third-party applications and operating systems on deployed virtual machines
- Operating system administration including the operating system itself or any operating system features or components
- Management of change to virtual machines, operating systems, custom or third-party applications, databases, and administration of general network changes within Customer control
- Remediation work associated with any problems resulting from the content, completeness, accuracy, and consistency of any data, materials, or information supplied by Customer
- Installation or configuration of VMware products not included in the scope of this document
- Installation and configuration of third-party software or other technical services that are not applicable to VMware components
- Installation and configuration of Customer-signed certificates, unless otherwise agreed upon
- Customer solution training other than the defined knowledge transfer sessions for each sprint
Appendix A – service checklist

The participation of the following customer stakeholders is required for the service to be performed.

- Enterprise architect
- Infrastructure architect
- VMware operations teams
- Network architecture team leads
- Network operations team leads
- Security policy team leads

Appendix B – detailed team breakdown

For fixed team services, the following is the team composition from VMware which will be used for the delivery of the service.
