

End-to-End Visibility across Clouds: VMware Aria Operations for Networks Universal

Monitor cloud-based networks without hassle with SaaS or an on-premise platform

Adopting a cloud-based network is a key IT strategy. But today's multi-cloud management brings challenges:

Lack of flexibility in monitoring network and cloud infrastructure

Understanding poor user experience by manually monitoring app data flow

Analyzing and optimizing traffic flow is a time-consuming process

No converged visibility across virtual and physical networks to improve application performance

What users want is a hassle-free and complete multi-cloud network monitoring solution - something flexible that reduces the intricacies of cloud adoption.

VMware Aria Operations for Networks Universal

A simple, easy-to-use, end-to-end network monitoring tool designed to help with application discovery, troubleshooting, and ensuring best practices network compliance across VMware NSX®, VMware Cloud™, VMware vSphere/vCenter, native public cloud as well as their physical infrastructure deployments.

Control the Cloud with Federation

As a VMware Aria Operations for Networks Universal exclusive capability, federation aggregates all Universal instances - on-premise or SaaS - on a single dashboard.

Check the entire network infrastructure via a federated dashboard

Check the health status of the cloud infrastructure environment

Toggle between different views like map view and list view

Keep a record of key items that changed in the last 24 hours

Analyze cloud traffic behavior across the environments

Examine topology and location via visual maps

Cross-launch peer instances for further troubleshooting

Licensing Simplified with VMware Aria Hub Subscription

Licensing can be complex - not anymore! With SaaS based VMware Aria Hub Subscription, maintain your licenses and compliance easily - while saving your IT staff time.

- Dedicated cloud subscription-manager platform
- Subscription activation and expiration dates
- Prompt compliance management

VMware Aria Operations for Networks Universal securely monitors and analyzes networks at scale to gain network visibility to improve applications across clouds.

VMware Aria Operations for Networks Universal for your Cloud Needs

For Multi-Cloud Networking

Gain unified visibility across hybrid and multi-cloud environments*

For Securing Your Apps and Cloud

Complete end-to-end network visibility gives greater security for applications and cloud

Integration with NSX Intelligence traffic flow collection

Application Discovery and Visibility

Harness meaningful insights and gain visibility into applications with machine learning

Migration Planning

Migrate to the cloud confidently and minimize risk levels by accurately mapping topology

Enhanced Troubleshooting

Optimize networks, VMs, and containers to minimize app latency; improve performance and reliability with Assurance and Verification with Guided Network Troubleshooting

Your Network Journey to Build, Run, Manage, Connect, and Protect any app on any cloud begins here!

- VMware Aria Operations for Networks Universal license is the way forward. Discover the new solution!
- VMware Aria Operations for Networks Universal for network visibility and integrations.
