

Multi-Cloud for Government

Six ways a multi-cloud strategy offers freedom, speed and control

VMware gives government agencies the smartest path to the cloud, edge, and app modernization, in order to deliver citizen services and meet mission demands. With VMware Cross-Cloud services, you can run and operate apps consistently across any environment.

Let's look at six ways a multi-cloud strategy can benefit your agency.

What does a multi-cloud strategy mean for government?

A true multi-cloud strategy enables visibility and interoperability across every cloud and every app with the control of a centralized management system. This cloud-agnostic strategy allows all cloud environments to run from one platform, and can be customized to meet changing needs and compliance mandates.

1/ Expand your choice and flexibility

97%

of government organizations expect to be managing more than 3 separate cloud environments in 3 years*

A multi-cloud strategy gives you the freedom to choose the best cloud for each purpose (app, data type, security requirement, workload), instead of being locked into a single provider. Run your applications anywhere—from data center to any cloud to the edge—on a single unified management system.

2/ Build operational resilience

With a multi-cloud strategy, you can move workload to different clouds if a breach or other incident occurs. This helps agencies avoid outages and downtime, and helps ensure consistency of operations and citizen services.

3/ Accelerate your application velocity

46% faster cloud migration*

70% faster Kubernetes**

A multi-cloud solution provides a fast path to migration and app modernization with less administrative overhead. Streamline IT workflows, deploy new software features faster, and leverage containers to meet changing public sector needs.

4/ Boost developer productivity and innovation

81%

of federal agencies are already using multiple cloud platforms*

A multi-cloud strategy allows IT to give developers ready access to security-compliant infrastructure and app catalogs that make re-platforming and refactoring applications faster and easier—or even unnecessary. Modernize existing applications and rapidly build new cloud-native applications.

5/ Increase efficiency across all clouds

94%

reduction in Day 2 Kubernetes ops*

A multi-cloud strategy helps you deliver consistent operations across any cloud. With visibility across all cloud and apps, you can set standard policies, quickly troubleshoot, and locate duplicative data that may be costing you money.

6/ Strengthen security and simplify compliance

68%

of government decision-makers cite maintaining governance and compliance regulations as their #1 app challenge*

A multi-cloud environment that takes a Zero Trust approach to security allows you to deliver the appropriate level of protection and compliance. Automate security policies and gain real-time visibility across all your clouds and applications to assess risks and quickly resolve issues.

Comply with FedRAMP High or Impact Level 3 or 4

A Tested Multi-Cloud Solution for Government

VMware Cross-Cloud services enable agencies to build, run, manage and secure all their apps across any cloud. Agencies gain the freedom and control to meet mission demands with the highest levels of efficiency and security.

It's the freedom of any cloud, with the simplicity of one.
