

Workspace ONE Mobile Threat Defense

Best-in-class security powered by Lookout

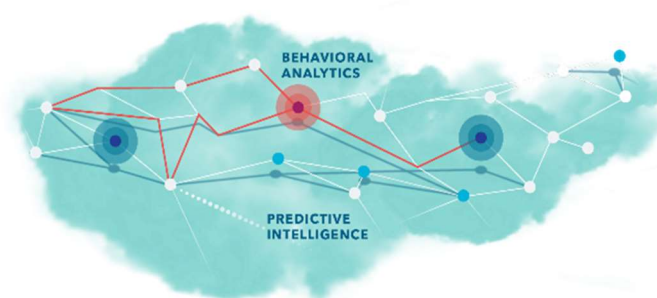

Leverage AI and behavioral insights generated from the industry's largest mobile dataset: The Lookout Security Graph

Behavioral analytics and predictive analytics are foundational to the ability to effectively detect and respond to threats. Workspace ONE Mobile Threat Defense protection leverages behavioral insights from an install base of more than 210 million devices; over 185 million apps analyzed, including applications from app stores; and 4.5 billion web items.

Insights derived from

- An install base of more than 210 million devices
- Over 185 million apps analyzed including applications from app stores as well as custom apps
- 4.5 billion web items

Lookout algorithms search the internet daily to find websites purpose-built for phishing, and countless custom apps have been analyzed for vulnerabilities via the Lookout API.

Lookout Security Graph

Machine learning based predictive intelligence allows for the detection of both known and emerging threats.

“We can instantly identify and monitor advanced cyberattacks or data breaches on iOS or Android devices. This increases employees' mobility without compromising safety. All this happens within the centrally managed VMware Workspace ONE platform.”

Petra Cremer
Information Security Consultant
Municipality of Enschede

Lookout: An innovative technology partner

Lookout created the first enterprise mobile security product and has detected more threats on mobile than any of their competitors combined. Lookout has discovered more than 1,200 mobile malware families since 2016. Workspace ONE Mobile Threat Defense is powered by Lookout.

Overcome mobile security challenges with VMware and Lookout

Workspace ONE Mobile Threat Defense makes it easier to deploy and manage mobile security for iOS, iPadOS, Android, and Chrome OS. Direct integration with the Workspace ONE platform allows for automated remediation and response. Comprehensive phishing and mobile threat protection can coexist with secure app tunneling. Aggregate reporting and integrations with third-party solutions help keep teams informed and engaged. Learn more about Workspace ONE Mobile Threat Defense [here](#).
