

VMware vRealize Cloud Universal Enterprise Plus with VMware Cloud Universal

Key benefits:

- 

Offers a deep portfolio of cross-cloud management and operations
- 

Provides flexible purchasing and consumption
- 

Empowers your business to move at your own pace

Unify flexible cloud management across hybrid, edge and public clouds

vRealize® Cloud Universal™ supports your business transition to cloud with a consistent hybrid and multi-cloud management experience. You get the flexibility to deploy as SaaS or on-premises and the freedom to move between the two as needed. Your business can move at your own pace, helping operations become more agile, scalable and efficient.

VMware Cloud Universal™ is VMware's leading program for multi-cloud acceleration, offering subscription purchase and consumption flexibility. It is designed to help companies accelerate their multi-cloud goals through freedom of cloud choice, agility, and cost-efficiency at all points of the IT transformation lifecycle. VMCU empowers customers with the ability to pick and choose the services they wish to use and 'pay for what they consume'. Customers can build their own pathways to multi-cloud spanning hybrid, private, edge, or public cloud environments.

VMware vRealize Cloud Universal Enterprise Plus solution overview

The vRealize Cloud Universal Enterprise Plus service tier is purpose-built for interoperability with VMware Cloud Universal. It is designed to accelerate cloud evolution by combining on-premises and SaaS capabilities for automation, operations, log analytics, and network visibility into a single offering. It gives the flexibility to deploy on-premises or as SaaS interchangeably, without the need to repurchase, for a consistent hybrid and multi-cloud management experience. The flexible licensing and delivery models enable organizations to move at their own pace, helping them to become more agile, scalable and efficient.

With vRealize Cloud Universal Enterprise Plus, your business can scale unified operations supporting multi-cloud infrastructures and across applications. The impact for your business is a single, federated management control plane that spans all IT touchpoints. Figure 1 summarizes the vRealize Cloud Universal Enterprise Plus solution components and topography.

Why vRealize Cloud Universal?

Combine SaaS and on-premises capabilities for automation, operations, log analytics, network visibility, security and compliance into one license

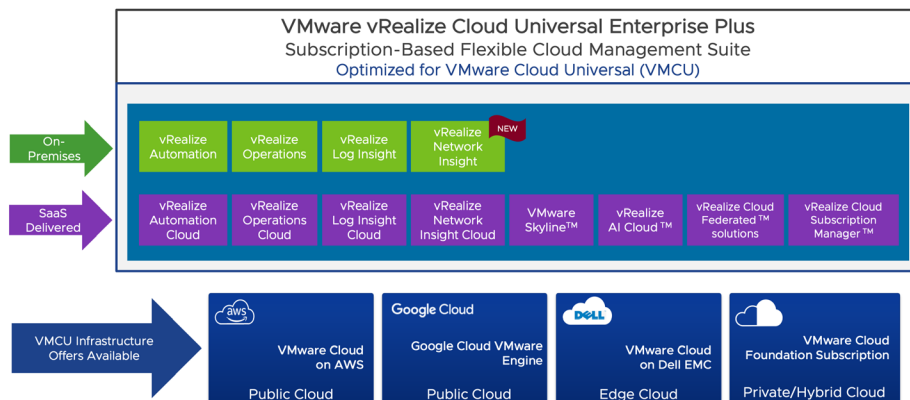

Figure 1: VMware vRealize Cloud Universal Enterprise Plus Offering with Available VMware Cloud Universal Infrastructure

vRealize Cloud Universal Enterprise Plus includes the following VMware products:

- **VMware vRealize Automation™ and vRealize Automation Cloud™** – Enables self-service catalog, governance, provisioning, orchestration and DevOps-based service delivery from a modern infrastructure automation platform
- **VMware vRealize Operations™ and vRealize Operations Cloud™** – Delivers continuous performance optimization, efficient capacity management, proactive planning, intelligent remediation and integrated compliance powered by AI and predictive analytics
- **VMware vRealize Log Insight™ and vRealize Log Insight Cloud™** – Delivers centralized log management, deep operational visibility and intelligent analytics
- **VMware vRealize Network Insight™ and vRealize Network Insight Cloud™** – Enables the acceleration and optimization of application networking and security across hybrid, private, edge and public clouds
- **VMware Skyline™** – Provides proactive intelligence that helps organizations avoid problems before they occur and reduces the time spent on resolving active support requests

vRealize Cloud Universal Enterprise Plus also includes powerful SaaS-only capabilities spanning:

- **VMware vRealize AI Cloud™** – Provides reinforcement learning to learn, adapt and optimize storage KPIs across mixed application workloads
- **VMware vRealize Cloud Federated Catalog™** – Delivers a unified catalog of IT infrastructure resources to end-users globally
- **VMware vRealize Cloud Federated Analytics™** – Enables a unified view of hybrid and multi-cloud environments in a single interface
- **VMware vRealize Cloud Subscription Manager™** – Delivers automated license usage metering from vRealize deployments, both on-premises and in the cloud

Note: vRealize Automation Cloud, vRealize Operations Cloud, vRealize Log Insight Cloud, and vRealize Network Insight Cloud are also available as standalone purchase options with VMware Cloud Universal.

Benefits when integrated with VMware Cloud Universal

vRealize Cloud Enterprise Plus, when combined with VMware Cloud Universal, empowers your business to accelerate productivity, cost savings, and business outcomes in multi-cloud and hybrid environments. Now you can incorporate a unified cloud management plane with integrated cloud automation, operations, federation, security and analytics. The chart below outlines common cloud management challenges in a multi-cloud or hybrid environment and how VMware provides solutions for long-term success.

Challenge	Solution: vRealize Cloud Universal Enterprise Plus with VMware Cloud Universal
Multiple cloud silos Single source of truth and the ability to report to management on the overall state of cloud infrastructure	Accelerate agility Unlock innovation by speeding up delivery of infrastructure, applications and services in a single, unified control plane
Rising costs Optimize costs and free up cash for core business functions by shifting from a CapEx to OpEx model	Optimize performance Maximize efficiency by delivering end-to-end intelligent operations at scale without the need to repurchase separate solutions for on-premises or specific clouds
Security and compliance Drive rapid business transformation while delivering enterprise-level resiliency, security, and operations	Manage and secure your cloud environments Mitigate risks by simplifying financial management, strengthening security and automating governance across hybrid, edge and public cloud environments
Operational continuity Transition on-premises workloads to SaaS at a pace that matches the needs of the business	Freedom of choice Consistently manage any infrastructure, any workload and any application, either on-premises or as SaaS, without business disruption

Why vRealize Cloud Enterprise Plus with VMware Cloud Universal?

- **Advanced cloud management and operations:** Accelerate cloud adoption and innovation with cloud-agnostic provisioning, infrastructure as code, federated catalog, and federated analytics
- **Flexibility:** Provision, optimize, and govern the cloud, with management capabilities available interchangeably as SaaS and on-premises to keep pace with cloud adoption and financial strategies
- **Intelligence:** Integrated AI and ML techniques enable customers to optimize performance, capacity, and costs as well as predict, prevent, and remediate from apps to infrastructure and across hybrid, edge and multi-cloud environments
