End-to-End Visibility across Clouds: vRealize® Network Insight™ Universal

Monitor cloud-based networks without hassle with SaaS or an on-premise platform

What was hard to be a hassle-free and complete multi-cloud network monitoring solution is now simple, easy to use, with vRealize® Network Insight™ Universal monitor cloud-based networks without hassle with SaaS or an on-premise platform.

A simple, easy-to-use, end-to-end network monitoring tool designed to help with application discovery, troubleshooting, and ensuring best practices network compliance across VMware NSX®, VMware SD-WAN™, VMware Cloud™, VMware vSphere/vCenter, native public cloud as well as their physical infrastructure deployments.

Adopting a cloud-based network is a key IT strategy. But today’s multi-cloud management brings challenges:

vRealize® Network Insight™ Universal license is the way forward. Discover the new solution!

Use vRealize® Network Insight™ Universal for network visibility and integrations.

End-to-End Visibility across Clouds: vRealize® Network Insight™ Universal

Lack of flexibility in monitoring network and cloud infrastructure

Understanding poor user experience by manually monitoring app data flow

No converged visibility across virtual and physical networks to improve application performance

Analyzing and optimizing traffic flow is a time-consuming process

As a vRealize® Network Insight™ Universal exclusive capability, federation aggregates all Universal instances - on-premise or SaaS - on a single dashboard.

Check the entire network infrastructure via a federated dashboard

Examine topology and location via visual maps

Analyze cloud traffic behavior across the environments

Cross-launch peer instances for further troubleshooting

Check the health status of the cloud infrastructure environment
