VMware Carbon Black Cloud
Customer Voice

The VMware Carbon Black Cloud is an endpoint protection platform that consolidates security leveraging the cloud, making it easy to prevent, investigate, remediate, and hunt for threats. All of this best-of-breed functionality is brought together on a single lightweight sensor, allowing Security and IT teams to prevent advanced attacks and reduce dwell time while also returning valuable endpoint resources to improve productivity of protected machines.

"The business problem we were trying to solve prior to picking Carbon Black was the same one that all IT departments are trying to solve – trying to find a really comprehensive security solution without impacting the behavior of our endpoints and the usability of them. We needed something that was going to keep us safe while allowing our users to work."

– **TREVOR ALBRECHT** | SYSTEM ADMINISTRATOR | DRAFTKINGS

"We had issues of ransomware. So we started going down the road as to what are solutions that are coming up that are able to actually have the insight and have the ability to block these types of ransomware attacks as well as remote access Trojans and fileless attacks that traditional antivirus just couldn't handle."

– **FULCANELLI CHAVEZ** | SR. SECURITY OPS ANALYST | D.A. DAVIDSON

"CB Defense is an excellent complement to network security monitoring. It logs executables and other activity in a way that is uniquely able to provide context for other systems."

– **GRANT STAVELY** | SR. SECURITY ENGINEER | EVERNOTE

"There is a need for a combined strategy between IT & Security. As a CISO, CB LiveOps is directly in line with what is required from SOC analysts. The ability to actually do live queries rather than rely on teams to use existing data is a big step forward."

– **CARL ERICKSON** | HEAD OF INFORMATION SECURITY | SIGNIFY *(formerly Philips Lighting)*

"CB ThreatHunter has simplified incident response by allowing quick discovery of both simple and advanced threats. Its simplicity and responsiveness are amazing, especially when you are running an investigation where every minute matters... Endpoint security used to be difficult."

– **DENIS XHEPA** | IT SYSTEMS SECURITY ENGINEER | MIDCAP FINANCIAL SERVICES
