### 1. IDENTIFY

Identify the applications and services running in your software-defined data center.

### 2. PLAN

Map application flows to identify dependencies between specific tiers of the application, between applications as well as between applications and other physical or virtual entities.

### 4. MANAGE

VMware Network Insight provides consistent security and network visibility across SDDC and VMware Cloud on AWS

### 3. MIGRATE

You're ready to migrate workloads to VMware Cloud on AWS with confidence. Hint: VMware HCX can help with that!
