

What's Stopping You from Getting Your Applications Out the Door?

Wish you could meet your development and testing requirements to get your applications to market faster? Now you can with VMware vCloud® Air™—a cloud service platform that provides on-demand access to compute resources that are 100% compatible with your VMware vSphere® environment.

Dev/Test

Dev/Test with vCloud Air

Too Much/Too Little Capacity

Having trouble anticipating capacity? Many organizations struggle to provide fast access to IT resources for dev/test.

Just-Right Capacity

Get on-demand access to compute capacity. Create virtual machines of any size. And dynamically scale up or down, eliminating over-purchasing and underutilization.

The Compatibility Gap

If your cloud and data center environments aren't compatible, you can't extend policies or easily port workloads between on and offsite. The result? Application errors, service disruptions, and delivery delays.

Bridge the Divide

Easily replicate your production environment, test in the cloud, and seamlessly port applications. vCloud Air provides the same results as in your onsite data center.

Resource Constraints

Every hour spent waiting for resources leads to delays in development cycles. And that impacts your business and your bottom line.

Remove the Barriers

Extend your existing infrastructure without new hardware. Avoid long procurement cycles. Purchase flexible subscription terms or even on-demand.

Top 4 Ways to Use vCloud Air for Dev/Test:

Test new packaged applications

Test upgrades of existing applications

Develop new in-house applications

Accelerate the software development lifecycle
