Are you struggling to deliver performance at minimal costs to meet the needs of your business? Are you spinning up a new data-center, consolidating, or modernizing and want to better use existing resources? Are you struggling to get unified visibility to better troubleshoot and accelerate decision making? Do you want to better manage risk and stay compliant with IT and industry regulations?

Rely on self-driving operations, which is a simple, yet powerful IT strategy for automating and simplifying operations management. It incorporates machine learning and big data analytics to predict, prevent, and intelligently remediate issues in hybrid and public clouds while keeping infrastructure in compliance - all so your IT team can be more proactive and agile.

Clouds as New Silos

Wake Up to VMware vRealize Operations

Every cloud is different. Each adds to operating complexity while reducing overall control, visibility, and governance.

Unplanned Work

Limited view from isolated infrastructure and fragmented tools make event correlation and root-cause analysis harder in dynamic environments.

Migration Headaches

Public clouds have steep learning curves. Hybrid clouds take more planning. Both require you to manually place workloads.

Mismatched Skills

Existing IT roles must evolve from doing to showing cloud's value, including giving business and DevOps teams 24x7 dashboards.

Cost Concerns

Declining budgets in the face of increasing demands require IT to optimize workloads and services continuously and more exactly.

Over-Provisioning

Without just-in-time resources to assure application performance, you're likely wasting money on needless infrastructure and missing SLAs.

Maintenance Burdens

Set and forget it isn't that simple. Both clouds and on-premises systems need to be monitored and managed, and you still have to troubleshoot them.

Continuous Performance Optimization

Automated workload balancing and placement

Continuous workload placement optimization for VMware Cloud on AWS

Host-based placement

Continuous performance optimization

Effective Capacity Management

Reclaim and rightscale

Correlative capacity and cost insights

Capacity planning

Efficient Capacity

Lowering costs

Efficient Capacity Management

Reclaim and rightscale

Correlative capacity and cost insights

Capacity planning

Reducing downtime

Integrated Compliance

Hybrid cloud configuration and compliance

Unified regulatory compliance

Automated configuration management

Improved risk management

Intelligent Remediation

Unified observability across multi-cloud (AWS and Azure)

AI-driven troubleshooting with metrics and logs

Native SDDC integrations

Common tagged apps for easy cross-cloud monitoring

Analyzing time to value

Wake Up to VMware vRealize Operations

Don't let IT management get in the way of delivering business value. Run production operations hands off and hassle free with self-driving operations powered by VMware vRealize Operations™.

VMware vRealize Operations delivers self-driving operations management from applications to infrastructure to optimize, plan and scale SDDC hybrid and multi-cloud deployments.

Delivered as an open and extensible platform with continuous availability
