Trust and the Distributed Workforce

Distributed Work Models Are Here to Stay

The events of 2020 profoundly changed where and how work is done. Organizations want to embrace a distributed workforce model, but must overcome three key obstacles.

1. **Challenge:** Providing frictionless access to tools and technologies whenever and wherever employees need them.

   **Solution:** Enable employees to work from anywhere with a managed integrated digital workspace that provides fast, simple and secure access they need to do their jobs.

2. **Challenge:** Protecting distributed endpoints with siloed security tools that can't scale.

   **Solution:** Set the visibility and management needed to make Zero Trust work, and simplify wide-area networking and security by delivering both as a cloud service.

3. **Challenge:** Employee sentiments of IT, HR and business decision-makers agree that their organization is experiencing the benefits of remote work and can't go back to how things were before.1

   61% of workers want to be able to work from home after the pandemic.2

   **Solution:** Completely automate the workspace in a manner that is driven by outcomes and not just tasks.

**Opportunities for VMware Partners**

Enable customers to build trust in the distributed workforce with VMware Anywhere Workspace. Anywhere Workspace combines three key VMware technologies:

- **VMware Workspace ONE®:** Unified endpoint management (Dell and app virtualization)
- **VMware Carbon Black Cloud:** Cloud native endpoint and workload protection
- **VMware SASE Platform:** Secure network and device management
