Raise Your Game

Provide desktops anywhere and make your users smile.

Effective virtual desktop infrastructure (VDI) helps you connect your whole team together – wherever they're located – and keep everyone more focused, productive and secure than ever.

Maximize everyone's productivity

As we advance towards more widely distributed workforces – with greater numbers of home, mobile and flexible workers – VDI offers a reliable and proven strategy for end-user computing.

Hitachi Vantara and VMware have come together to bring you the ultimate in high-availability VDI so you can react faster to changes in your market or operational environment.

"VDI has unique benefits – for example, keeping data off the endpoint, putting apps right next to data or servers, or renting a cloud workstation by the month instead of shelling out the capex for one that sits under a desk."

Reach your full potential faster

Hyperconverged infrastructure (HCI) is the key to delivering effective VDI.

Modern HCI systems are made of tightly integrated hardware and software components…
compute, storage, networking, hypervisor and management plane
…in fully prebuilt, pre-integrated and pretested solutions.

HCI therefore dramatically reduces the complexity, effort, time and cost involved in deploying VDI.

VDI today really delivers!

Modern HCI puts VDI in a whole different league compared to VDI implementations of the past.

Hitachi Vantara and VMware

The Hitachi Unified Compute Platform HC (UCP HC) is a fully-integrated VDI appliance that incorporates VMware vSAN and VMware Horizon 7 and is ready for immediate deployment.

- Start small with just two nodes and scale for large environments.
- Deliver a consistent user-experience, even during peak workload.
- Gain access to powerful management and automation capabilities.
- Benefit from expertise and insights to help design your right-sized VDI.

Achieve a lower TCO and reduce your IT footprint

"Hitachi's integrated HCI solution provided high availability for VMware Horizon virtual desktops, which was crucial for business success, without having to deal with multiple management tools. Unified Compute Platform HC helped us maximize the virtual desktop density, without sacrificing performance or resiliency, resulting in lower TCO and reduced IT footprint."

Matt Bouges,
Enterprise IT Architect, ConAgra Brands
