

Accelerating the Move to a Truly Hybrid Cloud

Move to a hybrid cloud and unlock a competitive-edge

Accenture’s deep technical experience and industry insights into how to make best use of VMware technologies and leverage new VMware capabilities

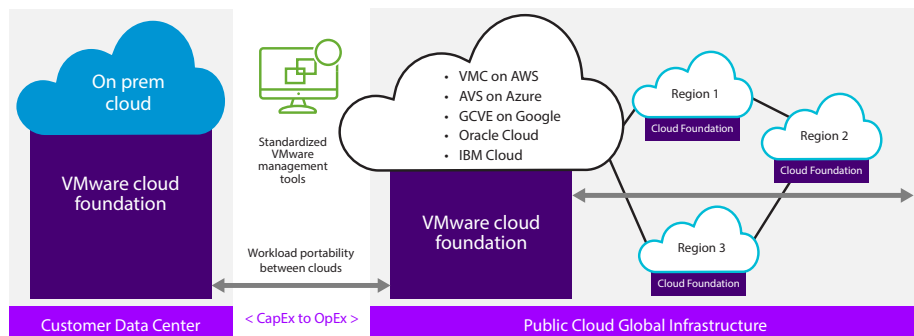

Beyond the Public Cloud: Hybrid Challenges

Many businesses have found that a single cloud architecture isn’t enough. Their customers’ expectations of success depend on harnessing the benefits of many clouds, across private, public, and edge—in other words, the hybrid cloud. The hybrid cloud vision delivers the flexibility, choice, and control that organizations need to achieve consistency across management and automation as well as workload portability.

When you utilize a hybrid cloud environment, you don’t have to re-platform, retool, or refactor your IT environment, and you don’t have to retrain your team because they’re using tools and methods they are already familiar with.

We Bring Private and Public Together

Enable operational consistency across the entire hybrid cloud.

Accenture and VMware Ready Hybrid Migration Worldwide

By moving to hybrid cloud, you can combine the hyper-scalers' innovation, speed, consumption, and scale with all the benefits that private cloud brings, including regulatory compliance, performance, data gravity and the chance to recoup your existing investments.

Accenture has managed over 34,000 cloud projects covering nearly every industry worldwide.

The Accenture VMware Business Group provides a comprehensive suite of solutions focused on hybrid cloud migration, integration, and scale preparation.

Solution	Value to an organization	How it works
VMware Cloud Foundation	Helps you to build a hybrid cloud environment (private, public, and edge), supporting traditional enterprise and modern applications	Support enterprises harnessing a public cloud, such as AWS, Google, IBM Microsoft, or Oracle, as well as those choosing a multi-cloud architecture. You benefit from increased enterprise agility and flexibility, with consistent infrastructure and operations across both private and public clouds.
Accenture myNAV®	Accelerates cloud from business case to value realization, helping you find the best way to shape, move, and operate your business in the cloud and deliver on value, faster	Proven platform that enables you to get it right first time.
Accelerated migration services	Helps to rapidly relocate VMware workloads to the cloud with speed and confidence	Powered by VMware Cloud and HCX, it enables faster containerization and rehosting of applications with VMware Tanzu and cloud management tools—seamlessly, securely, at speed, and scale.
VMware vRealize Cloud Management	Helps you drive continuous innovation and optimization to improve service levels, streamline operations, and reduce costs	Accessing a vast host of cloud-native services, you can be confident in the consistent deployment and operations of apps, infrastructure, and platform services across their hybrid cloud environments.
