

Efficiently Modernize Legacy Applications Across a Hybrid Cloud Environment

Build modern applications with
Accenture and VMware

Modern Application service that leverages Accenture technology expertise in custom/cloud-native engineering, application modernization, intelligent testing, agile delivery, and DevOps

Infusing Confidence at Every Step of Your Cloud-Native Journey

Whether it is private, public, or edge, the cloud is the preferred destination for running business applications and workloads. Many organizations have taken proactive, strategic positions for the betterment of their business's future.

Companies seeking to overcome the significant challenges that prevent the modernization of operations and innovation, are frequently asking questions such as:

- How can we speed our time-to-market?
- How do we increase process efficiency?
- How can we lower operating costs?
- Are there better ways to reduce our IT spend?
- Are there specialists who can show us how to slash IT maintenance costs?

While some organizations have the in-house resources to modernize their legacy applications—which enables their workloads to run in the cloud most effectively—many lack the necessary time, resources, and skillsets to successfully complete the projects internally.

If your organization falls in the latter category, Accenture and VMware are here to assist you to the cloud quickly, safely, and with confidence.

Build, Migrate, and Run Different With Accenture and VMware

Maximize your cloud's potential through modernized applications, infrastructure, and data architecture no matter where you are in your cloud journey.

Secure & Optimize Simultaneously optimize across performance, service levels, security, compliance and cost

Accenture and VMware Ready Modern Application Migrations Worldwide

Accenture leverages the cutting-edge technologies offered by VMware Tanzu to deliver Modern Applications, a comprehensive set of services that enables large-scale delivery across both public and private clouds. Our team of experts with experience in application development and cloud helps you to evaluate your needs, create a custom-tailored application roadmap, execute according to plan, and then scale the delivery efforts.

To ensure your Modern Application initiatives yield maximum business value, Accenture offers a variety of services to help you succeed:

Solution	How it works
Innovation Labs	Enable clients 1:1 pairing to build Kubernetes-native applications via User-centered design, Xtreme Programming, and Lean Product Management
Accelerated Delivery and Application Transformation	Accelerate development and delivery of new “greenfield” Kubernetes-native applications including digital decoupling
Application Modernization	Refactor or rebuild existing monolithic legacy systems with modern technologies and patterns to deliver Kubernetes-native solutions
One-Step Refactoring and Rehosting	Rapidly redeploy applications into containers and a Kubernetes architecture while rehosting to any cloud
Accenture Innovation Labs	Work side-by-side with experts from various industry verticals to rapidly migrate applications onto Tanzu Platform and prototype innovative products and services

With prescriptive Modern Application services from Accenture and VMware, it's easy to begin the application modernization process now, and define incremental steps in preparation for increasing:

- Cloud maturity of your application portfolio
- Automation in your software development lifecycle
- Cloud-based knowledge within your team

Confident Hybrid Cloud Solutions From Accenture and VMware

Multi-cloud expertise for developing secure, efficient hybrid cloud environments from popular cloud providers including:

VMware
vSphere

Amazon Web
Services (AWS)

Microsoft
Azure

Google
Cloud

Oracle

IBM

Whether your company's engineers pair with Accenture experts, or the Accenture team completes all the modern application work, your organization benefits from the expertise provided by a leader in technology services and cloud-native development. Modern Application services delivered by Accenture offers a prescriptive methodology that features:

- Defining business and technical priorities for all applications
- Creating a strategic roadmap for incremental application modernization
- Building Modern Applications via user-centered design, Xtreme Programming, and Lean Product Management
- Deploying a unified cloud-native platform used worldwide to run modern apps and containerized workloads
