

Google Chrome Enterprise & VMware Workspace ONE

Connect your employees to the cloud with a secure, streamlined endpoint solution.

Moving to the cloud transforms an enterprise’s relationship with technology. No matter where you are in your migration journey, the combination of Chrome Enterprise and VMware Workspace ONE can help you maximize your organization’s potential – improving end-user productivity at scale and offering greater visibility and management of your endpoints.

Chrome Enterprise

An OS and powerful devices built for the enterprise.

Increased productivity and reduced downtime: With a Chromebook, workflows are cloud-native by default – meaning backups and updates are applied automatically, and users have easy access to their enterprise applications information across devices.

Comprehensive security: Protect your business with enterprise-grade security and data protection at the user, application, device, platform and network level.

Hardware flexibility: A variety of form factors and price points from leading brands, including premium and 2-in-1 devices, allow you to cater for specific employee use cases and give them the hardware they need to be productive.

VMware Workspace ONE

A digital workspace platform powered by AirWatch technology.

Unified endpoint management: Enable IT to deploy apps and policies to Chrome OS devices alongside all other endpoints from a single console. Admins can gain real-time visibility into their entire deployment from one location.

Lifecycle management and security: Configure device restrictions and policies. Protect data from unauthorized use by wiping corporate data from the device if it is lost or stolen.

Access to any app or virtual desktop: Streamline access to any app - web, SaaS, native or virtual - through the Workspace ONE unified app catalog. Users can access virtual Windows desktops for access to legacy apps.

Combining the flexibility and value of Chrome Enterprise with the comprehensive endpoint management capabilities of **Workspace ONE** enables you to deliver secure and consistent access to the apps your employees need to be productive, while streamlining IT operations and reducing TCO.

Employee productivity at scale

- ✓ Consistent desktop and cloud, web, native, virtual app access
- ✓ Fast device boot and background system updates
- ✓ Sync across devices and work on-the-go with offline mode

Unified management and reduced TCO

- ✓ Manage Chrome devices alongside all other endpoints on a single platform
- ✓ Consistently set policies, settings and configurations across all form factors
- ✓ Total annual savings of \$482 per device (ESG, 2018)

End-to-end security

- ✓ Security at every level, from boot-up to shutdown, with full-disk encryption
- ✓ AI-driven threat detection via Safe Browsing and Google Play Protect
- ✓ Regular and controlled updates
