

Microsoft Azure VMware Solutions

Azure VMware Solutions

Q. Are Microsoft Azure VMware solutions, that Microsoft sells supported and certified by VMware?

A. Yes. By working with VMware Cloud Verified partners, such as CloudSimple and Virtustream, Microsoft is bringing to market VMware solutions that are verified, certified, and supported by VMware. If you experience a problem with Azure VMware Solutions, you should first contact your Microsoft support team. They can work with CloudSimple and Virtustream, and if need be directly with VMware, to address any issues.

Q. How do I administer and manage the VMware environment associated with the VMware solutions that Microsoft provides on Azure?

A. You can continue to use the same standard suite of VMware tools that you are using today, to manage your VMware on-premises environments. These include, but are not limited to, VMware vCenter, VMware vSphere Client, VMware vRealize Operations, VMware NSX Manager, and any applicable Power CLI or API calls.

Q. What VMware products are included in the VMware solutions that Microsoft offers as part of Microsoft Azure VMware Solutions?

A. Microsoft Azure VMware Solutions will be built on VMware Cloud Foundations and include the same technologies that you are familiar with and part of the VMware software-defined data center (SDDC) architecture vSphere, NSX and vSAN. We also expect Microsoft Azure VMware Solutions to add support for HCX in the near future.

Q. Can VMware workloads running in Azure integrate with other Native Azure services?

A. Microsoft has stated that customers can integrate Azure VMware solutions with native Azure services such as Azure Active Directory, Azure management and security services, Azure Cognitive Services and more.

Q. Where can I find additional information?

A. Please visit Microsoft's [Azure VMware Solutions website](#) for additional information.
