

Take a faster, easier and cost-effective path to the hybrid cloud

Modernize your applications with faster time-to-market and increased innovation with VMware and AWS

Match your apps to the best environment

Seamlessly migrate existing applications to the cloud without the cost, effort or risk of refactoring

Leverage global scale from the leaders in public and private cloud

Improve service experience with more options to develop, test, run or migrate applications on-premises and in the cloud

Simplify management with consistent operations

Leverage existing infrastructure, tools, policies, IT skillsets and processes

Realize unparalleled cost optimization through consistent infrastructure and operations

Streamline day-1 and day-2 operations for infrastructure, networking, VMs and containers on-premises and in the cloud

Modernize your applications while minimizing migration risk

Unique, jointly engineered, secure solutions for integrating public cloud and on-premises computing

Quickly migrate hundreds of apps with no refactoring and zero downtime

Modernize applications by tightly integrating with 175+ native AWS services

AWS is VMware's preferred public cloud partner for all vSphere-based workloads

VMware Cloud™ on AWS is the preferred service for AWS for all vSphere-based workloads

Join hundreds of other companies that have deployed a hybrid cloud with VMware and AWS
