Leadership Across the Stack

VMware Cloud Foundation: The Ubiquitous Hybrid Cloud Platform

VMware Cloud Foundation is the hybrid cloud platform that provides a comprehensive platform for performing various tasks. It is aimed at virtualizing and running applications in any environment, whether on-premises, in the cloud, or both. The platform is designed to make it easy for businesses to modernize and transform their IT infrastructure and operations.

A Full-Stack Platform for Better Outcomes

Use Cases

Private and Public Cloud

VMware Cloud Foundation is a platform that integrates all the components of the cloud, from compute to storage to network, into a single, unified platform. It allows businesses to create and manage their hybrid cloud environments, running applications across multiple cloud platforms. This enables businesses to take advantage of the benefits of each cloud environment, whether cost, performance, or compliance.

Modern Apps

Modern apps require cloud-native architectures, and VMware Cloud Foundation allows businesses to develop and deploy these apps in a cloud-native way. The platform enables businesses to take advantage of the benefits of cloud computing, such as scalability, agility, and cost savings.

IT Modernization

VMware Cloud Foundation enables businesses to modernize their IT infrastructure by providing a cloud-native platform that integrates all the components of the cloud. This allows businesses to develop and deploy modern apps in a cloud-native way, taking advantage of the benefits of cloud computing.

Virtual Desktop Infrastructure

Virtual desktop infrastructure (VDI) is a platform that allows businesses to deploy virtual desktops for remote workers. VMware Cloud Foundation provides a cloud-native platform for deploying and managing VDI, enabling businesses to provide remote workers with access to the desktop infrastructure they need to be productive.

VMware Cloud Foundation offers a wide range of private and public cloud deployment models, enabling organizations to rapidly develop and deploy container and VM-based applications based on cost, location, and compliance with operational business needs. Future-proof your organization and meet the changing needs of your business today.
