

# VMware NSX for Horizon – Get Started Today

Fast, easy, and extensible network and security policy for Horizon desktops and applications with VMware NSX

VMware NSX™ for Horizon® brings speed and simplicity to VDI networking with security policy that dynamically follows end users across devices and locations.

## Fast and Simple VDI Networking

Create, change, and manage security policies across all of your virtual desktops with a few easy clicks.

## Automated Policy That Dynamically Follows End Users

Set policies once that dynamically adapt to your environment. Enable network security services that map to the end user, independent of the underlying network infrastructure.

## Extensible, Role-Based Security

Leverage the best-in-class ecosystem of next-gen security capabilities—including antivirus, email, malware, intrusion prevention services, and more.

Organizations with mandated risk mitigation and regulatory compliancy can benefit from the simplicity and speed with which VMware NSX secures virtual desktop users within the data center.

## Add VMware NSX to Your Horizon Deployment

VMware NSX can now be easily added to your Horizon deployment with the “NSX for vSphere: Horizon Edition” Add-on. Available in 100-pack increments, this SKU is priced at \$125/user (NU and CCU).

Contact your VMware representative to find out more.
