

# VMware vCloud Air

## Virtual Private Cloud

### BENEFITS OF V CLOUD AIR

- **Compatible** – A true extension of your existing environment, compatible with your on-premises VMware vSphere® workloads with no need to rewrite applications.
- **Portable** – Bi-directional portability for both new and existing applications.
- **Seamless Networking** – Your IT infrastructure can extend beyond the physical limits of your data center to the cloud, without you having to change how you do things.
- **Common Management** – vCloud Air is architected on the same platform as vSphere and is integrated with various management tools including VMware vCloud Suite®, the full vRealize™ portfolio of products and many more.
- **One Support Call**
- **Broadest OS and Application Support** – vCloud Air supports over 5000 applications and over 90 operating systems that are certified to run on VMware.

### Virtual Private Cloud

VMware vCloud® Air™ Virtual Private Cloud is a scalable & secure public cloud infrastructure as a service solution that is built on the foundation of vSphere. Virtual Private Cloud offers compatibility with on premises vSphere workloads enabling customers with a true hybrid solution. All vCloud Air solutions support both new and existing applications, giving you the flexibility to create new or migrate existing workloads when you choose and always maintain control. Virtual Private Cloud is a cost-effective solution for expanding your business capacity to accommodate geographic and seasonal needs without building out costly data centers and suffer from underutilized resources.

### Use Cases

There are several use cases that make Virtual Private Cloud an ideal solution for extending your data center into the public cloud.

- **Test & Development** – Virtual Private Cloud is ideal for handling highly variable Test & Development environments, leaving you in control.
- **Web and Mobile Applications** – Whether you are a mobile developer or a DevOps guru, build and deploy your latest gen apps on a hybrid platform for greater interoperability with your data center.
- **Extending Existing Applications** – Virtual Private Cloud is ideal for existing test or production workloads.
- **Geographic Expansion** – Run your applications anywhere in the world for lowest latency and highest performance.

### Benefits of Virtual Private Cloud

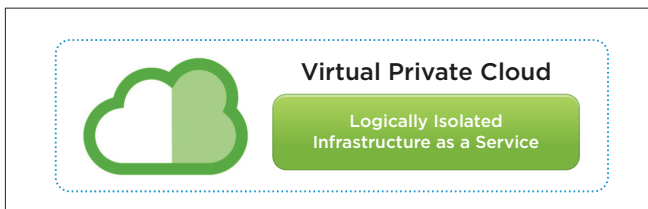

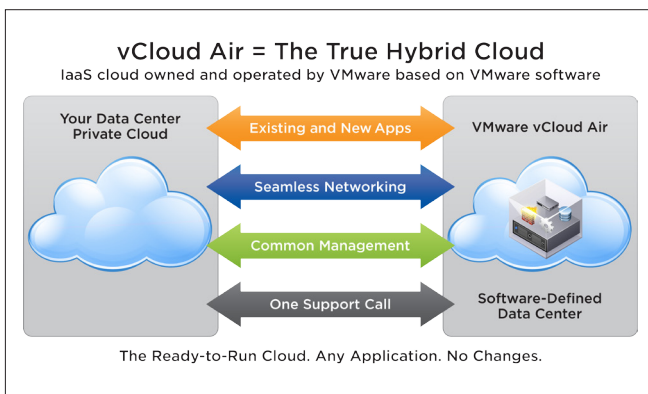

Virtual Private Cloud is a perfect public cloud offering for:

- CapEx to OpEx cost controls
- Lowering management costs using existing tools/processes
- Business-enabling data center scalability for greater revenue
- Improved ROI with full vSphere Compatibility on and off premises
- All inclusive cloud platform for simplicity and easy access

Businesses can more effectively support seasonal workloads, geographic expansions, mergers and acquisitions, or take advantage of more agile options for data center expansion needs. Virtual Private Cloud OnDemand provides the scalability of a public cloud environment when demand for resources can be inconsistent and difficult to size. The availability of open ended self service provisioning allows the flexibility you need when you need it.

### Service Details

Virtual Private Cloud includes scalable multi-tenant compute, storage and networking services that allow users to increase any of these capabilities as needs arise. Customers get to choose between standard and high performance SSD-accelerated storage offerings. Virtual Private Cloud can also be expanded

through a variety of add-on services including storage, data protection, data services and a full suite of VMware management tools. The support and virtualization costs are baked into the platform, so you'll encounter no additional fees.

Virtual Private Cloud is offered in two different packages to meet your purchasing and usage needs. Both packages offer customers' considerable value and flexibility in a public cloud solution, each offering the benefits of a true hybrid platform.

### OnDemand

Benefit from true self-service access to automatically resizable cloud services that seamlessly extend to and from your existing infrastructure with Virtual Private Cloud OnDemand. OnDemand is a no contract, pay-as-you-go Infrastructure-as-a-Service where you pay only for the resources that you consume with no up front costs or commitments. Provision resources into any location for optimized performance and reduced latency. Easily create, resize, rename or delete multiple virtual data centers.

This consumption-based cloud solution is metered by the minute and billed in arrears based on a fixed hourly rate per resource consumed. Offering compute, storage, networking and hybrid management capabilities, OnDemand is the next generation platform that enables cloud freedom.

Sign up online and pay via credit card or with the Subscription Purchasing Program to achieve maximum flexibility and control of your resource utilization.

### Subscription

Take full advantage of consistent billing and flexible payment options as well as monthly or annual contract terms to achieve advantaged pricing. Subscription packaging offers a defined pool of compute, storage and networking resources from which to build your environment. Easily expand your environment by increasing compute, storage, networking or other features to meet your needs. Virtual Private Cloud Subscription allows purchase via ELA, Purchase order or through the new Subscription Purchasing Program.

### How to Buy

Virtual Private Cloud is offered as both a term-based subscription service, with monthly and annual term options, and as a no contract, pay-as-you-go service called OnDemand. These services can be purchased via ELA, Purchase Order (PO), Subscription Purchasing Program (SPP), or directly via credit card.

#### Subscription

- Purchase via ELA, PO or SPP
- [Sign Up](#)

#### OnDemand

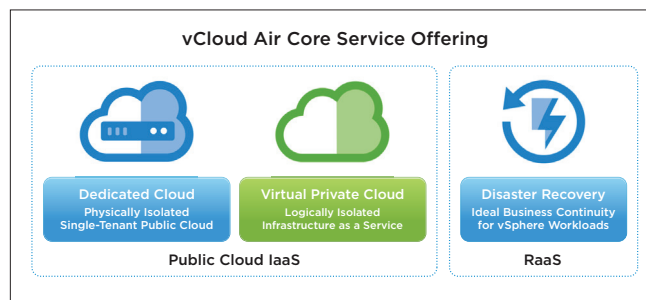

- Purchase via Credit Card or SPP
- [Sign up](#) online and provision in minutes.

### Support

VMware offers 24x7x365 production level support for all vCloud Air services. This is the same support call for your on premises workloads and your vCloud Air workloads makes for a simple solution. Virtual Private Cloud OnDemand also offers Online support for those who are more self sufficient.

For customers who require additional services, VMware also offers professional services engagements on best practices and getting started with your deployment, both directly and through an extensive network of certified professionals.

	ONDEMAND	SUBSCRIPTION
<b>Compute</b>	Consumption based, metered per minute	10GHz vCPU 20GB vRAM
<b>Storage</b>	Standard or SSD-Accelerated metered per minute	2TB of Standard or SSD-Accelerated
<b>Bandwidth</b>	Metered per minute	10Mbps (Burst to 50Mbps)
<b>Public Ips</b>	Metered per minute	2
<b>Optional Add Ons</b>	Included	Compute Storage IP Addresses
<b>Additional Options</b>	Direct Connect Offline Data Transfer	Direct Connect Data Protection Offline Data Transfer
<b>Support</b>	Online or Production Support 24x7x365	Production Support 24x7x365
<b>Contract Terms</b>	No Contract	1, 3, 12, 24, & 36 month Subscriptions
