

Boosts employee productivity with Horizon 7 on VMware Cloud on AWS, supporting work on any device

Improves IT responsiveness with the reliability of solutions offered by Status Pros and partner Dizzion

Increases performance and uptime of virtual desktops using Horizon 7 on VMware Cloud on AWS

# Status Pros Boosts Client Productivity with Horizon 7 on VMware Cloud on AWS

When companies want to bring modern technology into their workplaces, they turn to Status Pros. An IT services provider based in Silicon Valley, Status Pros offers solutions such as cloud infrastructure, network security and analytics that drive improved growth and efficiencies. To help power many of its offerings, Status Pros needed a high-performing, scalable technology foundation to offer to its clients of all sizes.

“We pride ourselves on introducing customers to new technology that will benefit them now and over the long term,” says Lucas Wellman, CEO at Status Pros. “We know many of our clients need to move to the cloud, and we set a high standard in the solutions we offer to customers worldwide.”

## Meeting the demand for remote work tools

One area where Status Pros sees continued, growing demand is in delivering reliable virtual desktop infrastructure (VDI) environments to companies. Status Pros’ customers, which include construction firms, legal offices, financial firms and other types of businesses, frequently deal with employees on the go. Whether employees work on the other side of the world at a client site or work from home, virtual desktops give these companies the option to replace a VPN or other less reliable approaches and empower staff to be instantly productive from anywhere.

STATUS | PROS

Status Pros exists to forge technology solutions for its clients that accelerate growth, streamline operational efficiencies and modernize the overall digital experience. Its offerings include digital innovation, network security, business intelligence and cloud services.

### ABOUT DIZZION

Dizzion is a global provider of desktop virtualization and end-user computing services. Specializing in compliant solutions, Dizzion provides high-performance, highly secure, fully managed virtualization solutions paired with industry-leading insight capabilities.

### VMWARE FOOTPRINT

VMware Horizon® 7 on VMware Cloud™ on AWS

### PLATFORM

Dizzion Cloud Desktops

---

“Our timeline for desktop deployments has dropped from weeks to days thanks to VMware and Dizzion. Hardware management was always one of the most difficult parts of customer service, but with VMware Horizon 7, we can get existing and new clients up and working faster than ever.”

LUCAS WELLMAN  
CEO, STATUS PROS

---

“The traditional managed service provider approach has been expensive and focused on reacting to problems,” says Wellman. “With our push into VDI, we wanted to implement solutions that minimize disruption and keep clients’ businesses running smoothly.”

### Shifting IT responses from reactive to proactive

Status Pros partnered with Dizzion, a VMware Managed Services Provider in the VMware Cloud Provider™ Program, to deploy its multitenant environment based on VMware Horizon 7 on VMware Cloud on AWS as the foundation for an integrated hybrid cloud for virtual desktops and applications. For Status Pros, Dizzion offered a highly secure solution alongside a strong cultural fit that emphasized outstanding customer service. Dizzion’s strong research and development process helped assure Status Pros that it could deliver responsive IT and virtualization resources to clients.

“When we first considered adding VDI, we were concerned we’d be responsible for building all of the infrastructure,” says Wellman. “By partnering with Dizzion, we have a robust cloud-based platform that enables us to focus on customer needs and expand our solutions internationally.”

By leveraging VMware Cloud and Dizzion resources, the virtualization strategies offered by Status Pros work equally well in private or public cloud environments. “We give our clients the flexibility to quickly scale up or down based on their needs,” explains Wellman. “We’re also providing a solution that makes it easy for them to deal with industry regulations like HIPAA or PCI.”

### A digital workspace for productivity anywhere, from any device

The VDI solution based on VMware enables Status Pros’ clients to be productive on any authorized device from any location, without jeopardizing security. For Status Pros, the move toward virtualization built on the offering from Dizzion has streamlined previously time-consuming workflows and opened up new revenue opportunities.

“Our timeline for desktop deployments has dropped from weeks to days thanks to VMware and Dizzion,” says Wellman. “Hardware management was always one of the most difficult parts of customer service, but with Horizon 7 on VMware Cloud on AWS, we can get existing and new clients up and working faster than ever.”

Status Pros’ customers have seen similar efficiency gains. For instance, one construction client in Sonoma, California, worked with Status Pros to efficiently lift and shift its legacy IT infrastructure into the cloud. Through virtualization, employees can now instantly collaborate on projects whether they’re working at a construction site or back at the main office.

### Looking ahead

Along with plans to expand into the healthcare industry, Status Pros is looking to further share the productivity gains of VDI with other clients around the world.

“Thanks to having Dizzion as a partner, we can successfully offer a reliable, scalable VDI environment based on Horizon 7 on VMware Cloud on AWS,” says Wellman. “The solid working relationship we have with Dizzion and the strength of the VMware solution translates into real benefits for our clients worldwide.”
