Employee-Friendly Workspaces Grow in Importance

Heterogeneous Desktop OS and Device Form Factor Support Are Rapidly Becoming Critical

Risks of Not Keeping Pace

A Competitive Workspace

The Time Is Now for UEM

The Urgent Call for Digital Workspace Management

Employee-Friendly Workspaces Grow in Importance

Yet, only 45% of enterprises see a major goal of mobile device deployment decisions in the workspace as a tool to improve and enhance worker productivity.

Only 43% of employee-liable (BYOD) devices are managed in the enterprise
Only 63% of corporate-liable devices are managed in the enterprise

Heterogeneous Desktop OS and Device Form Factor Support Are Rapidly Becoming Critical

Windows is still the dominant business PC OS—but not the way it once was:

By 2020, total installed base of Windows 10 PCs in businesses will be lower than the installed base of any other business Windows version in the history of the OS.

Growth of Macs in the enterprise, and emerging B2B use cases for Chromebooks, means IT teams will need unified endpoint management (UEM) tools that support multiple operating systems and form factors.

Risks of Not Keeping Pace

Mobility technology deployment and OS management issues are way too common:

40% of enterprises experience security issues
32% of enterprises experience security issues where mobile devices with sensitive data were physically lost or stolen
23% of enterprises experience compliance issues where patching is necessary to be compliant

46% of enterprises experience security issues
48% experience various critical issues between mobile devices and enterprise applications or mobile OS.

UEM Solution

UEM Solution

46% want UEM for ability to apply single security and management policies across multiple device types (laptops, PCs, smartphones, tablets, etc.)
27% experience version-control issues between mobile OSes, applications, and/or enterprise apps
60% of enterprises want UEM to reduce number of software platforms used to manage endpoints
61% want to consolidate mobility and PC management of 10 or more for greater efficiency and coordinated endpoint management capabilities

A Competitive Workspace

Your competitors are moving full speed ahead to managing their workforces:

But there’s more work to be done:

43% of employee-liable (BYOD) devices are managed in the enterprise
And a whopping 63% of corporate-liable devices are managed in the enterprise

For only 36% of enterprises, “overall deployment of mobile technology expectations” have been exceeded.

The Time Is Now for UEM

Greater flexibility for employees while facilitating mobile device experiences that employees want and are familiar with using = more competitive workforce, improved opportunities for productivity, and sales successes.

Better master and metadata management = aligning entire company around a common set of metrics, KPIs, data definitions, and business rules.

81% of enterprises plan to use in part or completely unified endpoint management within the next 18 – 24 months
