

# VMware Cloud Activation Essentials

For VMware Cloud on Dell EMC

## AT A GLANCE

VMware Cloud Activation Essentials for VMware Cloud on Dell EMC accelerates migration to a modern VMware vSphere®-based Infrastructure. This service includes a solution overview, connecting to your first SDDC, deployment and pairing of VMware HCX components, and the successful migration of your first virtual machine.

## KEY BENEFITS

- Quickly start your cloud journey
- Expedite deployment of HCX
- L2 extension of one network segment
- Successfully migrate one virtual machine
- Learn about workload migration best practices and methodology in a guided workshop

## SKU

PS-VMC-D-ACT-ESSL-C

## Service overview

VMware Cloud Activation™ Essentials for VMware Cloud™ on Dell EMC provides an expedited deployment of VMware HCX® product components and successful migration of one virtual machine (VM) from your on-premises environment to VMware Cloud on Dell EMC. To ensure your team is fully enabled to perform additional workload migrations, this service also includes a knowledge transfer workshop which provides an overview of the VMware application migration methodology, best practices, and Information resources.

The following activities are included in this service:

- Validation of requirements and review of your first VMware Cloud SDDC
- Deployment of HCX components and pairing with VMware Cloud on Dell EMC
- L2 stretching one network segment
- The migration of one low-complexity virtual machine
- A VMware Migration Methodology knowledge transfer session

This service requires the following VMware on-premises and VMware SaaS products, with vendor-supported versions as agreed to by VMware and Customer at project kickoff, but limited to those that are in general availability (GA):

- VMware Cloud on Dell EMC
- VMware HCX (source requires VMware vSphere 6.0 or higher) (\*)

(\*) Note: please check the VMware Requirements and Product Interoperability Matrix links in the Appendix

## Service Delivery Description

Service activities will be delivered remotely by VMware Professional Services. Due to the nature of some on-premises components and security aspects we require Customer to join virtual sessions and engage their infrastructure, network and security teams when appropriate to execute required actions (i.e., firewall port configurations or appliance deployments) under VMware Team supervision. The delivery team will also require validating the proper configurations and requirements are in place before proceeding with the remote installation.

## Service Capabilities

This service provides the following:

- Review and finalize connectivity to your VMware Cloud on Dell EMC SDDC
- Enable of the application and workload mobility platform (HCX)

## Project scope

The scope of the service is defined in the following tables.

VMWARE SDDC IN VMWARE CLOUD ON DELL EMC		
SPECIFICATION	PARAMETERS	DESCRIPTION
VMware Cloud on Dell EMC SDDC	Up to one (1) Cluster	Review connectivity and validation of requirements for the first existing SDDC of VMware Cloud on Dell EMC
Configure firewall Rules	Up to five (5)	Configure VMware on Dell EMC firewall rules

VMWARE HCX		
SPECIFICATION	PARAMETERS	DESCRIPTION
VMware Cloud on Dell EMC VMware vCenter Server® Instances	Up to one (1)	VMware Cloud on Dell EMC SDDC vCenter server instance where to pair VMware HCX
On-Premises vCenter Server Instances	Up to one (1)	On-premises vCenter server instance where to deploy VMware HCX for pairing
On-premises Layer 2 networks extended	Up to one (1)	On-premises Layer 2 networks to extend with VMware HCX
Additional VMware HCX Activities		Review of the source VMware HCX vCenter plug-in and standalone interfaces, the migration of one low-complexity virtual machine using VMware HCX.

## Out of scope

The following are out of scope items for this project.

### General

- Installation and configuration of custom or third-party applications and operating systems on deployed virtual machines
- Operating system administration including the operating system itself or any operating system features or components
- Management of change to virtual machines, operating systems, custom or third-party applications, databases, and administration of general network changes within Customer control
- Remediation work associated with any problems resulting from the content, completeness, accuracy, and consistency of any data, materials, or information supplied by Customer
- Installation or configuration of VMware products not included in the scope of this document

- Installation and configuration of third-party software or other technical services that are not applicable to VMware components
- Installation and configuration of Customer-signed certificates
- Configuration of VMware products used for the service other than those implemented for the mutually agreed-to use cases
- Customer solution training other than the defined knowledge transfer session

#### VMware Cloud on Dell EMC

- Creation of user roles and groups
- Creation of local accounts
- Configuration of LDAP/Active Directory sources
- Creation of Networking segments, VPNs, and additional firewall rules not included in the specific service scope
- Design or configuration of interconnectivity between different SDDCs or other native cloud services
- Creation of additional SDDCs

#### VMware HCX

- Creation of additional network extensions or stretched networks
- Deployment of additional target or source endpoints
- Deployment and configuration of Enterprise features like OSAM, MON, RAV or Mobility Groups

### Estimated Schedule

VMware estimates that the duration of this project will not exceed 2 weeks. VMware Professional Services will operate according to a schedule agreed to by both parties. Typically, professional services are performed during normal business hours and workdays (weekdays and non-holidays).

### Project Activities

#### Phase 1: Initiate

VMware hosts a project initiation call with key Customer and VMware stakeholders.

Topics to be discussed include:

- Project business drivers, scope, and objectives
- Project deadlines, timelines, scheduling, and logistics
- Identification of key Customer team members who VMware will work with to accomplish the tasks defined in this data sheet
- Technology prerequisites necessary for a successful project, including review of the Service Checklist for the VMware solution
- Confirmation of team members and contact details will be exchanged to schedule the project kickoff meeting

Deliverables include:

- Initial pre-engagement call

### Phase 2: Plan

VMware leads a project kickoff meeting with Customer to assess prerequisite completion readiness, review the VMware standard architecture, and confirm project milestone dates.

The objectives of the meeting are as follows:

- Introducing the VMware team, roles, and responsibilities
- Describing the project goals, phases, and key dates
- Explaining the expected project results and deliverables
- Agreeing on communication and reporting process
- Validating the project expectations and clarifying roles and responsibilities

After Customer and VMware agree on project expectations, the VMware Project Manager and the Customer Project Manager work together on the detailed project plan.

Deliverables include:

- Project kickoff meeting minutes
- VMware Cloud on Dell EMC Cloud activation kickoff presentation

### Phase 3: Execute

The key activities for this phase are organized into Deploy and Knowledge Transfer subphases.

In the Deploy subphase VMware deploys, documents, and validates the technology components according to the specifics. VMware does the following:

- Installs and configures the VMware technologies according to the specifics
- Finalizes the Configuration Workbook
- Executes service and service component functional test validation

In the Knowledge Transfer subphase, VMware conducts knowledge transfer sessions covering the design, deployment procedures, and operations procedures relating to the technologies in the scope of this project. VMware does the following:

- Conducts technical knowledge transfer sessions for administrators and operators
- Conducts up to 4 hours of knowledge transfer sessions, including fundamental operational discussions

### Phase 4: Close

VMware conducts a closure meeting of up to 2 hours with the Customer covering project status, reviewing completions, next steps and how to engage with VMware support.

#### LEARN MORE

Visit [vmware.com/services](https://vmware.com/services).

#### FOR MORE INFORMATION

Contact a VMware Professional Services expert at [vmware.com/company/contact.html](https://vmware.com/company/contact.html).

#### TERMS AND CONDITIONS

This datasheet is for informational purposes only. VMWARE MAKES NO WARRANTIES, EXPRESS OR IMPLIED, IN THIS DATASHEET. All VMware service engagements are governed by the VMware Professional Services [General Terms and Conditions](#). If you are located in the United States, the VMware contracting entity for the service will be VMware, Inc. If you are outside the United States, the VMware contracting entity will be VMware International Limited.

This service must be delivered and accepted within the first 12 months of purchase, or the service will be forfeited. Pricing for this service excludes travel and other expenses. For detailed pricing, contact your local VMware representative.

#### Appendix

The following Customer stakeholders are required to deliver this service:

- VMware operations team leads
- Application operations leads
- Security policy team leads
- Enterprise Architect
- Infrastructure Architect
- Network Operations team leads
- Network Architecture team leads

The following are the technical prerequisites to deliver this service:

- The VMware Cloud on Dell EMC hardware should have been already delivered and physically provisioned at customer's site
- The VMware Cloud on Dell EMC first SDDC is already created
- VMware vCenter Server version 6.0 or higher for HCX Components
- Virtual machines must be running hardware version 9 or higher
- 3+ on-prem IP addresses from management network for HCX service installation
- Virtual machines must have VMware tools installed
- Virtual machines must reside in a service cluster (defined in the compute profile)
- Each Virtual machine overall allocated disk size should not exceed more than 250 GB
- Distributed vSwitch for networks that has to be extended
- The availability of the NTP service is critical to system operations
- Bulk migration potential throughput can vary depending on bandwidth available for migrations, latency, available CPU/MEM/IOPS, and disk read speed. For successful switchover phase, the bandwidth and network conditions must be sufficient to satisfy the operation considering the dataset and virtual machine data change rate. For more information about how to determine bandwidth requirements, see [Bandwidth Requirements for vSphere Replication](#)
