### At a glance

Research shows that 70 percent of organizations are actively engaged in cloud migration, and 56 percent plan to migrate more than half of their app estate to the cloud.<sup>1</sup> The question is how fast you can get it done, and how many different clouds you need. IT professionals need to accelerate their moves to the cloud while achieving maximum ROI. But how?

It’s possible with VMware vRealize® Cloud Management™, the intelligent hybrid cloud management solution that empowers you to consistently deploy and operate your apps, infrastructure and platform services, from the data center to the cloud to the edge. You can accelerate innovation with quick and easy access to services, gain efficiency by improving visibility and automation, and improve control and mitigate risk through unified operations and governance.

### How to accelerate cloud evolution

vRealize Cloud Management offers the following capabilities:

- Confidently migrate applications – Enjoy a full view of component dependencies, network requirements, and your security posture, simplifying application migration.
- Choose the most cost-effective deployment environment – Decide what works for your organization across private and public clouds.
- Gain unified visibility – Gain unified visibility into health and performance across all business-critical apps after migrating your workloads, no matter where they live.
- Consistently deploy applications to any endpoint – Have as many clouds from as many vendors as you need via cloud-agnostic provisioning.
- Gain end-to-end network visibility – Have assurance that network and application connectivity perform toward business and security intents.

### How to buy

VMware vRealize Cloud Universal™ combines both on-premises and software as a service (SaaS) in one license, so you can flexibly move to cloud at your own pace.
