

VMWARE vREALIZE SUITE LIFECYCLE MANAGER

VMware Cloud Management Platform

vRealize Suite delivers a comprehensive cloud management platform (CMP) that enables a highly agile and efficient hybrid cloud environment across on-premises software-defined data centers (SDDC) and public clouds. The suite includes the following component products:

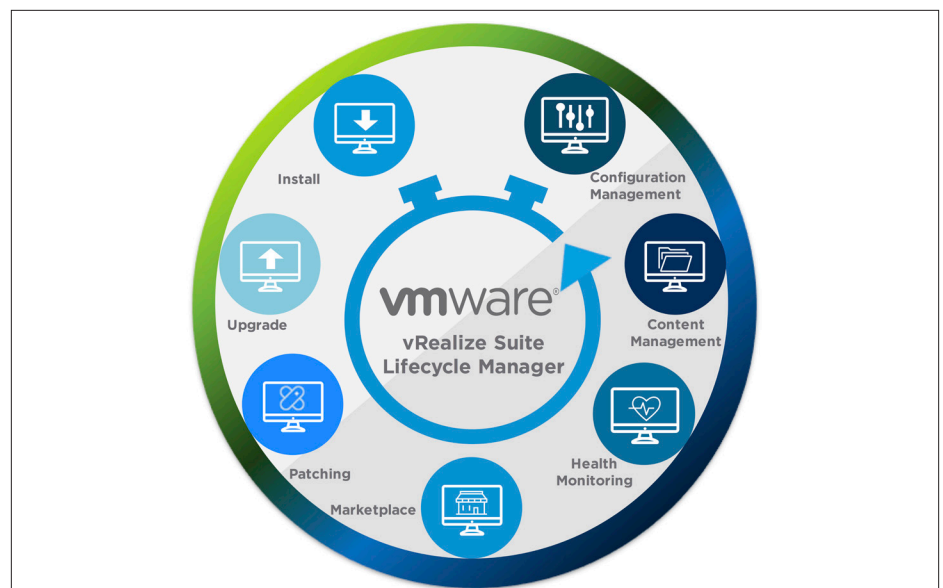

- **VMware vRealize Automation™** – Automate IT service delivery processes (infrastructure, containers, applications, and any custom IT service) to rapidly respond to business needs.
- **VMware vRealize Operations™** – Enable intelligent operations from applications to infrastructure to help organizations plan, manage, and scale their SDDC and multi-cloud environments.
- **VMware vRealize Log Insight™** – Provide real-time log management and log analysis for deep operational visibility and fast troubleshooting across hybrid cloud environments.
- **VMware vRealize Business™ for Cloud** – Provide cost visibility through automated hybrid costing analysis, consumption metering, cloud comparison, and planning capabilities.
- **VMware vRealize Network Insight™** – Deliver intelligent operations for software-defined networking and security to help organizations build an optimized, highly available, and secure network infrastructure across multi-cloud environments.

AT A GLANCE

VMware vRealize® Suite Lifecycle Manager™ delivers complete lifecycle and content management capabilities for vRealize Suite products. It helps customers accelerate time to value by automating deployment, upgrades, and configuration, while bringing DevOps principles to the management of vRealize Suite content.

The Best Way to Manage Your vRealize Suite

vRealize Suite Lifecycle Manager helps organizations speed up initial deployments, minimize admin tasks of ongoing product management, and ensure best practices at the same time. Whether you choose to use an individual product or different suite editions, always start with vRealize Suite Lifecycle Manager to maximize the benefit of the vRealize product portfolio by reducing the time and effort invested.

KEY BENEFITS

- Accelerate time to value – Simplify the deployment and upgrade process with automated pre-checks and validations.
- Minimize ongoing management – Automate configuration and drift management with health monitoring across the vRealize product portfolio.
- Apply DevOps principles – Enable automated CMP content management and easy collaboration with pre-built content pipelines.
- Enable best practices – Enforce alignment with VMware recommended reference architectures and validated designs.

LEARN MORE

vRealize Suite Lifecycle Manager is available as part of VMware vRealize Suite Standard, Advanced, and Enterprise editions.

What Does vRealize Suite Lifecycle Manager Deliver?

- **Rapid installation** – Simple and flexible deployment model with product- and solution-based installation supported. Automated environment replication and validation process.
- **Easy ongoing management** – Automated management of configuration, certificate, and config drift, with health monitoring.
- **One-click upgrade** – Simplified upgrade and patching process with environment snapshot function.
- **DevOps for CMP** – Out-of-the-box pipelines automate the capture, version control, testing, and deployment of vRealize content across multiple users and different environments.
- **In-product marketplace** – Integration with the VMware Solution Exchange marketplace enables easy access and consumption of curated content and out-of-the-box building blocks provided by VMware and ecosystem partners.
- **Best practice implementation** – Alignment with VMware recommended reference architectures and validated design (VMware Validated Design™) through pre-defined settings.
