In today’s perimeter-less world, employees access corporate data and apps from their device of choice. Creating IT complexity and new security risks.

As threats adapt and increase, more security controls are implemented, disrupting employee productivity.

Organizations need to bridge the gap between security and experience while lowering management complexity.

Introducing Workspace ONE Intelligence

**Insights and automation to device and app deployment, engagement, usage and user experience**

**How**
- Real-time visibility and response
- Identify out-of-compliance devices
- Apply patches faster
- Reduce IT time and cost on common tasks
- Automate access control policies

**Benefits**
- Resolve issues faster
- Reduce escalations
- Increase employee productivity
- Optimize license and asset costs

**Examples**
- Admin Notices App
  - Adoption Decrease
  - Gathers and Analyzes Data
  - Identifies Devices with App Slowdowns
  - Sends Notification to Users
  - Pushes App Update
- Security Vulnerability
  - Identifies Vulnerable Devices
  - Triggers Automated Remediation
  - Deploys Patches
  - Back to Safe State
