

VMWARE WORKSPACE ONE TRUST NETWORK

Q. What is Workspace ONE Trust Network?

A. VMware Workspace ONE™ Trust Network™ gives organizations a comprehensive and modern enterprise security approach to secure their users, apps, endpoints and networks. Workspace ONE Trust Network provides a set of capabilities to protect, detect and remediate threats across the evolving digital workspace.

Workspace ONE Trust Network combines insights from Workspace ONE, the industry's first intelligence-driven digital workspace platform, with trusted security partner solutions to deliver predictive and automated security in the digital workspace.

Q. What are the benefits of Workspace ONE Trust Network?

A. Existing security tools provide IT with only limited visibility, focusing only on silos of security that provide legacy functionality. This results in a band-aid approach that impacts organizations with high-costs due to complexity and manual tasks involved in trying to secure a digital workspace. Workspace ONE Trust Network provides a set of capabilities to protect, detect and remediate threats across the evolving digital workspace, based on a framework of trust and verification. Workspace ONE Trust Network:

- Removes security solution silos to give IT an action-based framework that provides an aggregated view across the digital workspace
- Is the only solution that combines access, device and app management with insights and automation across an end-user computing ecosystem
- Uniquely leverages an open and trusted partner ecosystem so customers can continue to use existing investments

Q. Is Workspace ONE Trust Network a platform, a feature, an architecture or an ecosystem?

A. Workspace ONE Trust Network is an approach to securing the evolving digital workspace. Workspace ONE Trust Network augments the inherent security delivered by the intelligence-driven Workspace ONE platform with a new set of capabilities to integrate with a rich ecosystem of partner solutions to deliver continuous risk monitoring and rapid mitigation response.

Q. What security capabilities are built into the Workspace ONE platform?

A. Security capabilities include access management, contextual policies, Data Loss Prevention (DLP), encryption and more. For more information, visit: www.vmware.com/products/workspace-one/security

Q. What security capabilities do Workspace ONE Trust Network partner solutions provide?

A. Partner solutions that support Workspace ONE Trust Network integrate with Workspace ONE to provide a comprehensive approach to securing the digital workspace. Partner technologies focus on mobile threat defense, endpoint detection and remediation, cloud-access security, and more.

Q. How can customers purchase Workspace ONE Trust Network?

A. Workspace ONE Trust Network capabilities will be available to Workspace ONE customers who have Workspace ONE Intelligence. Workspace Intelligence is available in Workspace ONE Enterprise, Workspace ONE Enterprise for VDI and as an add-on to Workspace ONE on-premises editions.

Q. What happened to the Mobile Security Alliance?

A. The Mobile Security Alliance (MSA) unifies threat security for business mobility against cyber-attacks by integrating the industry's leading security solutions with the VMware AirWatch EMM (enterprise mobility management). As the device management industry shifts from EMM to UEM (unified endpoint management) and ultimately the digital workspace, organizations must evolve their security approach that goes beyond enterprise mobility. Workspace ONE Trust Network provides organizations with a modern approach to securing their entire end-user ecosystem across all endpoints, apps and employees.

Q. Will VMware continue to support the Mobile Security Alliance?

A. Yes. VMware will also work with Mobile Security Alliance partners to explore opportunities to support Workspace ONE Trust Network.

Q. When can we expect partner integrations?

A. Integrations between Workspace ONE and partner security solutions to support Workspace ONE Trust Network are currently underway. More information will be available soon.

Q. Where can I find out more about partners' solutions that support Workspace ONE Trust Network?

A. The VMware Solution Exchange will provide more information on partners' solutions. For more information, visit: <https://marketplace.vmware.com/vsx/>

Q. How do partners sign up to support Workspace ONE Trust Network?

A. More information will be available soon.

Q. Where can I get more information about Workspace ONE Trust Network?

A. For more information, visit: www.vmware.com/products/workspace-one/security.
