

Network Virtualization Deploy Service

5 REASONS to Expand Virtualization to Your Data Center Network

Achieve a more efficient and secure operational model for networking

VMware's industry-leading Network Virtualization platform allows IT to build a true Software-Defined Data Center (SDDC), reduce costs, increase productivity, efficiency, agility and responsiveness, simplify provisioning and support business continuity and disaster recovery.

1

Transform Data Center Economics and Overcome Expensive Challenges

With the operational model of a VM, transform the economics of data center network and security operations. Using a policy-driven approach, NSX treats the physical network as a pool of transport capacity, with network and security services attached to VMs.

- ✓ Improve operational efficiency
- ✓ Increase network security

2

VMware NSX: The Network Virtualization Platform for a SDDC

VMware NSX breaks through current physical network barriers and offers massive improvements in security, agility and economics.

- Rapid deployment
- Automated policies improve security
- Securely isolate networks

3

Transition to an Agile, Secure and more Stream-lined Networking Model

The Network Virtualization Deploy Service delivers rapid, successful deployments based on a validated reference design and built for your growing needs.

- Deliver cloud and SDDC capabilities
- Validate a VMware NSX implementation
- Improve user security with granular control

4 Deploy Network Virtualization with Professional Services Expertise

Learn the fundamentals of a network virtualization and security solution and deploy a best practice-based, foundational VMware NSX implementation.

A SOLID FOUNDATION

- Start with a deployment built for growth
- We'll help set up a standardized NSX environment
- Ready for advanced network virtualization and security use cases

A SCALABLE ENGAGEMENT

- Leverage a pre-validated foundational architecture
- Gain the experience to scale network virtualization across the enterprise
- Quickly learn and articulate solution capabilities and benefits

THE RIGHT EXPERTISE

- Receive two weeks of guidance from industry experts with planning, rapid deployment and knowledge transfer

5 Create Positive IT Outcomes

Significantly reduce CapEx:

- Standardize services on logical resources
- Optimize the data center footprint
- Rapidly deliver holistic IT services on demand
- Shift security to fine-grained isolation with micro-segmentation
- Give administrators more time for value-added projects
- Integrate with business continuity and automated disaster recovery
