vmware®

Still using branch routers?

IT'S TIME TO RECONSIDER.

69%
SD-WAN

1.7%
ROUTERS

Death of the Router.

By 2021, the SD-WAN market will exceed all expectations, becoming the platform of choice for companies of all sizes.

Branch routers are out.

The experts agree:

IDC

"If I am doing full-blown SD-WAN, and I have the capabilities that give me routing, as well as WAN optimization, my need for buying those individual point products will obviously go down."

Gartner

"SD-WANs to replace routers. A single router, good for just one campus, can cost thousands of dollars. SD-WAN uses simpler hardware yet provides flexibility and reliability at an unbeatable price."

Cloud-delivered.

Architecture matters.

SD-WAN enables cloud applications/services.

Future-proofs the network. No path to obsolescence.

Today.

VMware NSX SD-WAN by VeloCloud is available today.
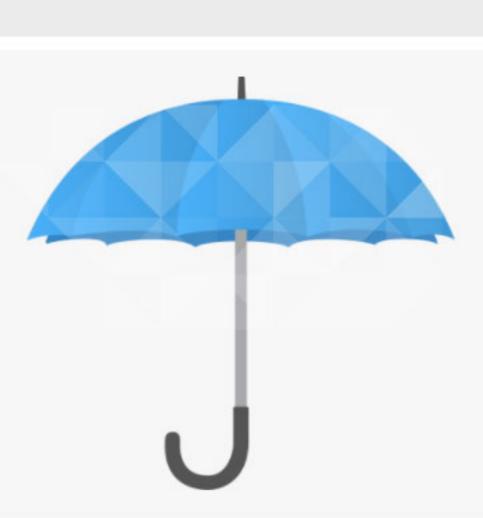

No phasing. Roadmap is defined. Simple migration path.

Flexibility, visibility, scalability, security. All you need and more.

Reduce your risk.

Investment in branch routers keeping you from a better solution?
