Overview

The severity of the problem and the service levels of the support program that you purchase determine the speed and method of our response targets. Following are the response time targets for providing the initial response.

On-Premises Severity Definitions

Critical (On-Premises Severity 1) – Production server or other mission critical system(s) are down, and no workaround is immediately available.

- All or a substantial portion of your mission critical data is at a significant risk of loss or corruption.
- You have had a substantial loss of service.
- Your business operations have been severely disrupted.

Severity 1 support requires you to have dedicated resources available to work on the issue on an ongoing basis during your contractual hours.

Major (On-Premises Severity 2) – Major functionality is severely impaired.

- Operations can continue in a restricted fashion, although long-term productivity might be adversely affected.
- A major milestone is at risk. Ongoing and incremental installations are affected.
- A temporary workaround is available.

Minor (On-Premises Severity 3) – Partial, non-critical loss of functionality of the software.

- Impaired operations of some components but allows the user to continue using the software.
- Initial installation milestones are at minimal risk.

Cosmetic (On-Premises Severity 4) – General usage questions.

- Cosmetic issues, including errors in the documentation.

Cloud Services Severity Definitions

Critical (Severity 1) – Critical production issue that severely impacts your use of the service. The situation halts your business operations and no procedural workaround exists.

- Service is down or unavailable.
- Data corrupted or lost and must restore from backup.
- A critical documented feature / function is not available.

Major (Severity 2) – Major functionality is impacted, or significant performance degradation is experienced. The situation is causing a high impact to portions of your business operations and no reasonable workaround exists.

- Service is operational but highly degraded performance to the point of major impact on usage.
- Important features of the software-as-a-service offering are unavailable with no acceptable workaround; however, operations can continue in a restricted fashion.

Minor (Severity 3) – There is a partial, non-critical loss of use of the service with a medium-to-low impact on your business, but your business continues to function. A short-term workaround is available, but not scalable.

Cosmetic (Severity 4) – Inquiry regarding routine technical issues.

- Information is requested on application capabilities, navigation, installation, or configuration.
- Bug is affecting a small number of users. Acceptable workaround is available.
