

VMWARE HORIZON CLOUD IS BETTER THAN AMAZON WORKSPACES

VMware Horizon® Cloud is an exciting cloud service for **delivering Windows desktops and applications to any device**. Amazon WorkSpaces lacks many enterprise-class features and only delivers persistent desktops, which can lead to significantly higher costs per user.

BEST END-USER EXPERIENCE

Horizon Cloud **adapts to any device and changing network conditions** to ensure the best possible end-user experience.

- Unity Touch – Beyond just gestures
- USB and multimedia
- vGPU always available (at no additional charge)
- Single sign-on to apps and desktops

LOWER MANAGEMENT COSTS

Horizon Cloud **provides concurrent-based pricing dramatically reducing TCO** in certain environments.

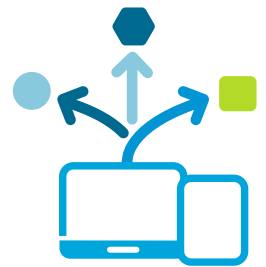

- Production support is included
- No charge for network out fees
- Concurrency is supported for the lowest cost per user
- Named-user pricing for on-premises and/or cloud

ENTERPRISE-GRADE SUPPORT

Horizon Cloud offers **simplified delivery of desktops and applications** as a cloud service, to any device, anywhere.

- 99.9% SLA
- 24x7 support
- Secure network separation (multi-tenancy)
- Control where users can connect from

ULTIMATE FLEXIBILITY

VMware gives customers the **ability to choose DaaS, on-premises desktops, or a hybrid of both** deployment options.

- Windows Client or Windows Server desktop
- Shared sessions and apps
- True app publishing, not just deployment to virtual desktops
- Nonpersistent desktops
- Reservation capacity for disaster recovery
- Fast app delivery
- Instant provisioning

VMWARE HORIZON CLOUD CUSTOMERS SAY:

“VMware Horizon Air [Cloud] enables employees to access their desktop from any location, even at Grandma’s house. I’ve had employees approach me to tell me how great it is that they can get home and start working exactly where they left off in the field. And they can use the same familiar desktop they have on other devices. This has been the key for users—they love it.”

JARIN DYKSTRA,
SR. MANAGER,
INFORMATION SYSTEMS,
SEVENTY SEVEN ENERGY

“Previously, when a customer asked for virtual desktops, we would need to set up their own physical infrastructure and configure the necessary software, which was very costly and time intensive; so much so that many SMBs could not see the financial advantage of virtual desktops. However by delivering through VMware Horizon Air [Cloud] we can provide desktops ‘on-demand’ with businesses only paying for what they need and when they need it. Multi-tenancy is a must for successful cloud delivery and partnering with VMware therefore became essential to achieving this.”

MATTEO FRARE BARUTTI,
ICT SOLUTIONS ARCHITECT,
FASTWEB

“The performance was great, and the ease of deployment was really what sold Zebra on Horizon Air [Cloud]. It is incredibly easy to spin up a couple hundred desktops quickly. VDI became a huge success for us to get people onto Zebra’s network right through their basic Internet port.”

SCOTT MYERS,
CLOUD ARCHITECT,
ZEBRA TECHNOLOGIES
