

VMware Site Recovery Manager Air

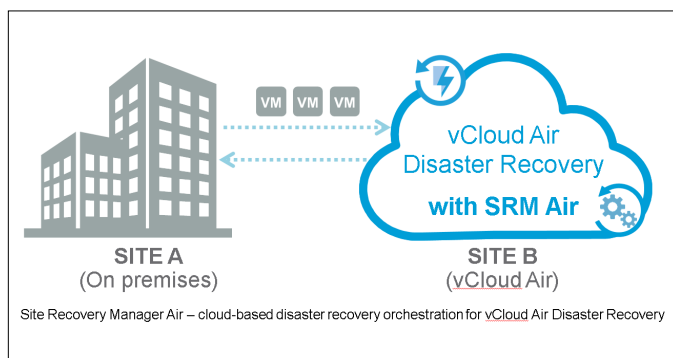

Cloud-based Disaster Recovery Orchestration for vCloud Air Disaster Recovery

AT A GLANCE

VMware Site Recovery Manager™ Air™ brings the benefits of the industry-leading solution for disaster recovery automation to vCloud Air Disaster Recovery™, enabling simple, fast and reliable recovery of protected virtual machines in VMware vCloud® Air™. Site Recovery Manager Air is based on mature, award-winning technology that has been tested and proven in thousands of on-premises deployments.

KEY BENEFITS

- Protect and recover large groups of virtual machines using centralized recovery plans
- Ensure reliability of recovery by conducting frequent non-disruptive recovery plan testing
- Accelerate recovery time using automated orchestration workflows

What Is Site Recovery Manager Air?

VMware Site Recovery Manager Air is a software-as-a-service solution that offers recovery plan management and automated orchestration built into vCloud Air Disaster Recovery.

Site Recovery Manager Air is deployed as a software-as-a-service application in vCloud Air and managed through the vCloud Air portal.

It is fully integrated with vCloud Air Disaster Recovery to provide self-service protection, centralized recovery plans and orchestration workflows for migration, failover and failback of virtual machines between on-premises data centers and vCloud Air.

Key Benefits

vCloud Air Disaster Recovery with Site Recovery Manager Air delivers following benefits .

Simple cloud-based protection

The software-as-a-service operational model eliminates single points of failure and enables management anytime, from any device. It also eliminates on-premises installation and potentially disruptive upgrades.

Site Recovery Manager Air provides an intuitive user interface integrated with the vCloud Air portal, enabling self-service creation, testing and execution of disaster recovery plans for large groups of virtual machines.

Fast and reliable recovery

Site Recovery Manager Air reduces recovery times and improves reliability by providing automated workflows that orchestrate the testing, failover and failback of virtual machines.

Perform automated recovery plan testing as frequently as needed to ensure reliable and predictable recovery times. By leveraging an isolated network in the vCloud Air Disaster Recovery instance, you avoid any impact to production systems. Detailed reports are generated for testing and failover activities, which you can use to satisfy regulatory requirements.

Industry-proven technology

Site Recovery Manager Air is based on mature, award-winning technology that has been tested and proven in thousands of on-premises deployments across all customer segments and industries.

Site Recovery Manager Air brings the management and automation benefits of this technology to vCloud Air Disaster Recovery through a new software-as-a-service operational model that is ready for hybrid cloud environments.

How to Get It

Site Recovery Manager Air will soon be available as a standard feature of vCloud Air Disaster Recovery. For more information, please read the [FAQ](#).
