

VMware Workspace ONE Mobile Flows

Automate business processes
and increase productivity

KEY BENEFITS

VMware Workspace ONE mobile flows enable you to drastically improve experiences and tasks that were previously costly, time consuming, and resource intensive. With Workspace ONE mobile flows, IT organizations can:

- Save time and money by automating business processes
- Deliver better user experiences by increasing employee satisfaction and productivity

What is VMware Workspace ONE?

VMware Workspace ONE® is the intelligence-driven digital workspace platform that simply and securely delivers and manages any app on any device by integrating access control, application management, and multiplatform endpoint management. It starts with simple, single sign-on access to cloud, mobile, web, and Windows apps in one unified catalog, and includes powerfully integrated email, calendar, file, and social collaboration tools that engage employees.

Employees choose their own devices or benefit from employer-provided devices with the ability for IT to enforce fine-grained, risk-based conditional access policies that also take into account device compliance information delivered by unified endpoint management technology. Workspace ONE automates traditional onboarding and laptop and mobile device configuration, and delivers real-time application lifecycle management that bridges legacy enterprise client-server apps to the mobile-cloud era. Powered by intelligence, the Workspace ONE platform uniquely combines workspace data aggregation and correlation to deliver integrated insights and automation, which helps organizations manage complexity and security without compromising the user experience.

For organizations just beginning the steps toward digital transformation, the Workspace ONE platform provides a compelling experience right out of the box for employees. The next step is to begin automating employee business processes through personalized, intelligent workflows geared to drive user productivity by removing task complexities across business solutions, regardless of device.

Introducing Workspace ONE mobile flows

Workspace ONE mobile flows empower organizations to improve user experience, and increase user productivity and satisfaction of IT tools. Mobile flows give IT and internal development teams a simple, standardized approach to deliver intelligent workflows and notifications from other back-end systems within the Workspace ONE products employees use most: Workspace ONE Intelligent Hub and Workspace ONE Boxer. Mobile flows give employees in-the-moment information and allow them to complete tasks and/or take action across business systems without leaving the Workspace ONE Intelligent Hub or Workspace ONE Boxer app.

Flexible connector options for every workflow

Workspace ONE mobile flows can be built into Workspace ONE Intelligent Hub and Workspace ONE Boxer. VMware provides two different approaches to turn on, customize, or build custom workflows to back-end systems.

Workspace ONE console connectors – no coding required

In the Workspace ONE console, VMware offers a handful of pre-built connectors that can be toggled on and off. These require no additional coding and are only available through Workspace ONE Intelligent Hub.

FIGURE 1: Workspace ONE console connectors and use cases.

Out-of-the-box or custom connectors – low code

Customers can take advantage of open-source, pre-built connectors from VMware, which can be found on [GitHub](#). These pre-built connectors can be used as is or customized to fit a desired workflow.

Customers can also leverage the open-source framework from VMware to build completely custom connectors to any back-end to meet their organization's unique use case.
