

Workspace ONE Boxer

The Inbox Users Love, the Security IT Needs and Workflows Across Systems to Bring it all Together

KEY BENEFITS

- A beautiful application with a consumer-simple and intuitive user experience
- Integrated experience across email, calendar and contacts streamlining mobile micro-moments
- Personalization of the email experience with customization and account preferences
- Email as a platform for seamless business workflows with other app and business systems through Workspace ONE mobile flows
- Enterprise-grade security and support for corporate-owned and BYOD use cases
- Comprehensive, customizable email migration kit to boost end-user adoption

Workspace ONE Boxer

VMware® Workspace™ ONE™ secure productivity apps empower mobile productivity with engaging business apps to solve for mobile micro-moments and drive digital transformation. As part of the Workspace ONE suite of apps, Workspace ONE Boxer combines consumer simplicity with enterprise security. The app provides frictionless access to enterprise email, calendar and contacts across corporate-owned devices and bring your own devices (BYOD). As more business gets done on mobile than ever before, an effective mobile email solution is critical to any enterprise mobile strategy. The containerization of business data from personal data enables IT organizations to exceed their enterprise security, compliance, data leakage prevention (DLP) and user privacy requirements.

A Truly Engaging, Efficient App Experience

Workspace ONE Boxer is highly customizable, allowing users to personalize the app to meet their needs and working style. With features like custom swipe gestures, quick replies, send availability, custom smart folders, account color preferences, email notification settings and more, Boxer is designed to be personalized so users can work faster than ever on mobile. The all-in-one email, calendar and contacts app provides an intuitive user experience following native operating system (OS) design guidelines and has the ability to surface notifications and action workflows from other business systems with Workspace ONE mobile flows. Users can streamline workflows by leveraging unique capabilities in Boxer, such as sharing availability by simply selecting available timeslots on the calendar, single tap conference call dialing, and more. Additionally, they can expect a delightful email solution with real-time notifications, reminders and updates to stay on top of their inbox. Multiple accounts can be added to the Boxer app, if allowed by IT policy.

Streamlined Enterprise-Grade Security and Compliance

Boxer ensures end-to-end encryption of data at-rest and in-transit with AES 256-bit encryption. IT can trigger manual or automatic compliance actions to block or wipe enterprise data based on password policies, jailbreak/root detection, device compatibility, OS compatibility, and other policies. S/MIME allows users to digitally send and receive signed and encrypted messages. Boxer also supports email classification markings with built-in Microsoft Exchange transport rules. The containerized app can manage business data and associated policies while ensuring user privacy. The advanced data leakage prevention (DLP) controls, such as open-in, copy/paste, and other restrictions, allow IT organizations to configure their deployment to meet the needs of their security posture.

Integrated Workflows Across Business Systems

With Workspace ONE mobile flows, organizations are able to derive context within Boxer and surface notifications and action workflows from other business systems. The mobile flows framework consists of out-of-the-box or custom built connectors, helping organizations to easily and securely deliver time saving workflows in the app users statistically use most with minimal development. From an employee standpoint, mobile flows offer a modern and compelling experience and enable users to complete tasks and gain in-the-moment insight from other business systems without leaving the Boxer app.

Comprehensive Mobile Management Platform

Today, IT must deliver on core operational and compliance requirements in an environment which is more complex, diverse and dynamic than ever before. Workspace ONE, powered by AirWatch technology embraces this shift in the market and understands the need to build unification into our platform to create flexibility for organizations to deploy any app to any device, while keeping enterprise data secure and users productive. This unification is driving organizations to create a digital workplace. Our powerful automation engine eases strain on IT both with initial deployment and the day-to-day management. Workspace ONE provides the tools to fast track your deployment and make initial setup easy so users can get up and running quickly. For simplifying day-to-day tasks, configure compliance rules and automate the remediation process with the compliance engine. Self-service capabilities enable end users with basic management functionality, such as resetting a passcode, to alleviate IT ticket requests.
