I appreciate VMware Cloud Foundation for its full stack infrastructure automation. **I like that there's no need to configure servers one by one; you can spin up everything with just one click through the SDDC manager.** Features like vCenter quick patching and ESX live patching are actual life savers as they significantly reduce risk and save a lot of time.

I really appreciate not having to jump into five different consoles anymore thanks to VMware Cloud Foundation (VCF). The new installer worked flawlessly the first time, and the Kubernetes integration is solid. The new VCF installer and fleet management in version 9.0 make deployment and patching manageable, which means fewer weekends ruined.
