

How to Deliver a Unified Cloud Experience

VMware Cloud Foundation™ makes it simple

Essential components of a unified cloud experience

Barriers to delivering a unified cloud experience

1. Lack of automation and orchestration

Manual infrastructure provisioning and ticketing processes slow down dev cycles.

2. Inadequate support for modern app development

Inability to adopt cloud-native solutions or AI/ML services can hold back development teams.

3. Limited infrastructure visibility and monitoring

A lack of insight into infrastructure performance and health leads to time-consuming troubleshooting.

4. Interoperability and scalability issues

Connecting modern, cloud-native apps with older systems can be difficult and result in performance degradation.

5. Security and privacy concerns

Protecting sensitive data and ensuring regulatory compliance can be challenging.

95%

of tech companies are integrating AI features into new apps.¹

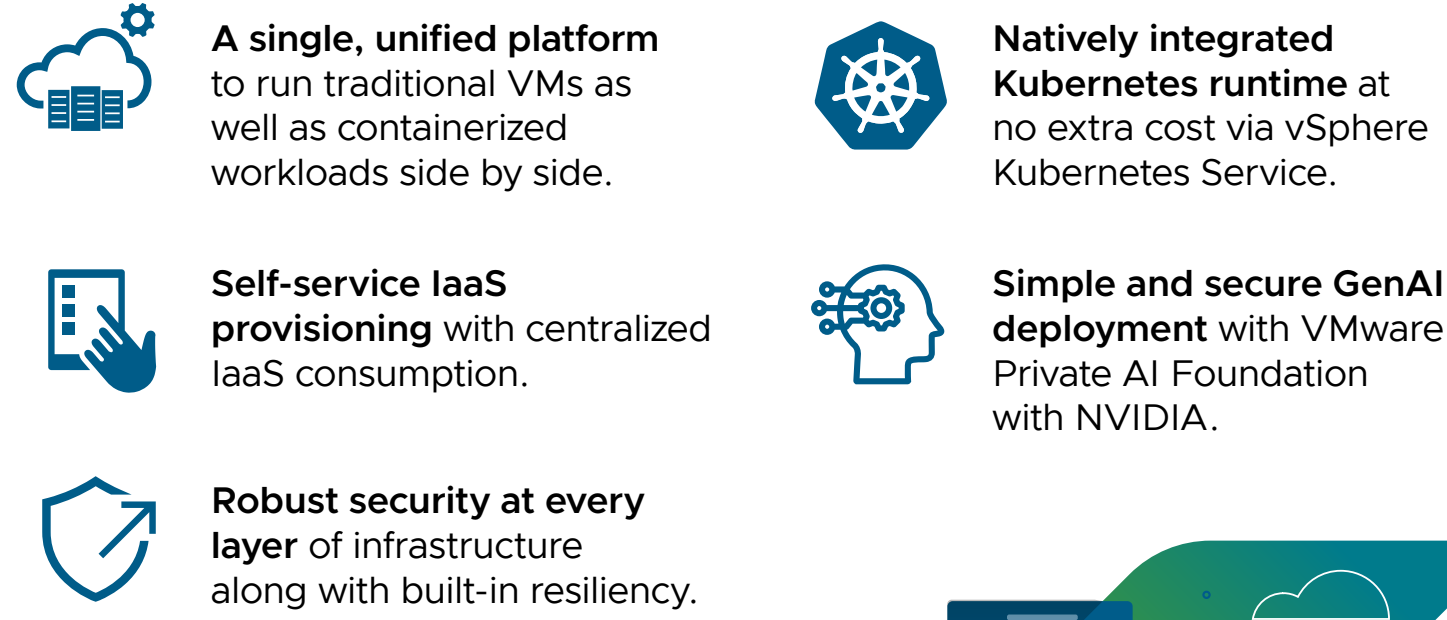

39%

of organizations are investing in infrastructure for generative AI behind their firewall because of data privacy and security concerns.²

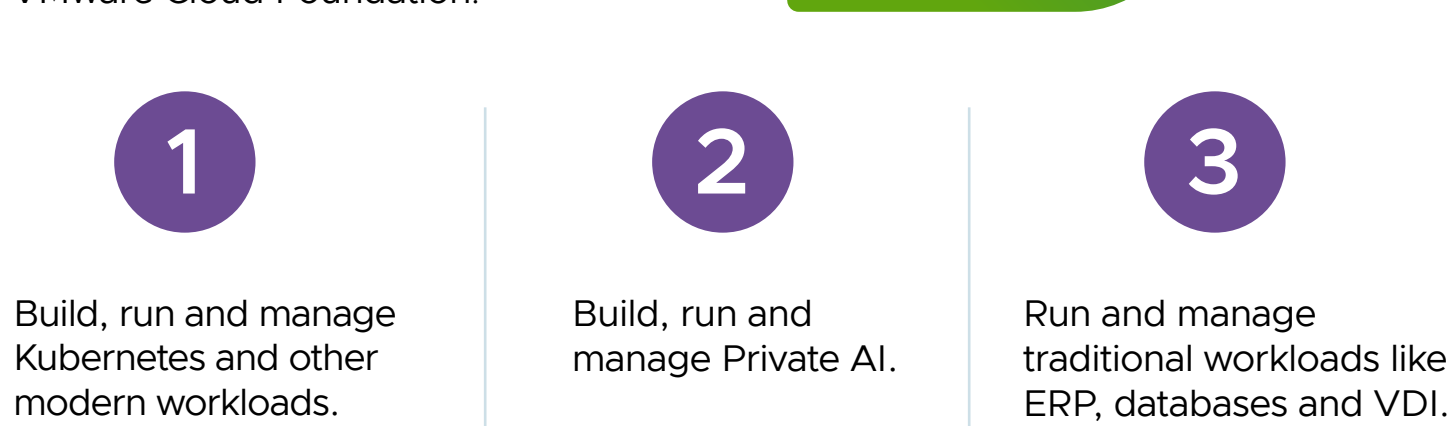

Remove these barriers with VMware Cloud Foundation

Here's what you'll get:

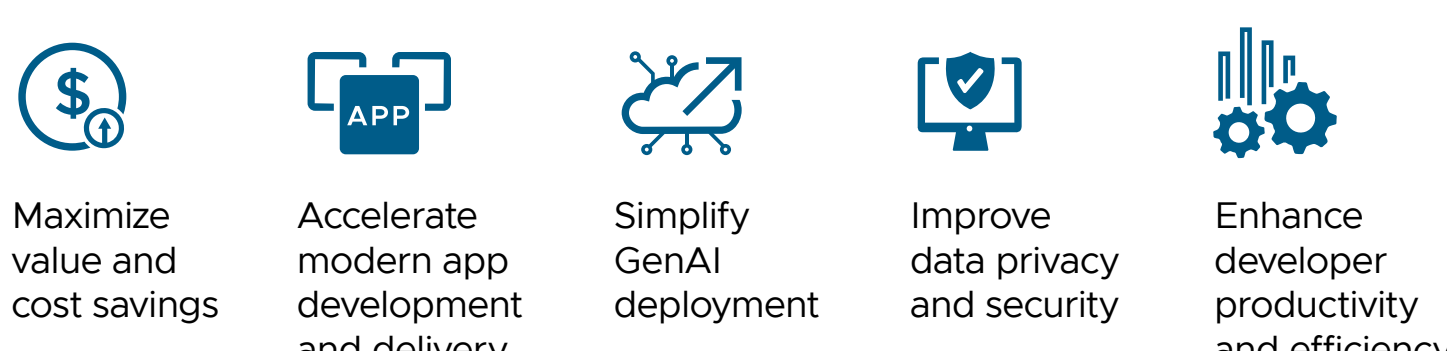

Top 3 use case scenarios

Here's what you can do with VMware Cloud Foundation:

Why choose VMware Cloud Foundation?

Deliver a unified cloud experience and realize these powerful benefits:

68% faster to market, new applications³

61% faster to deploy new VMs³

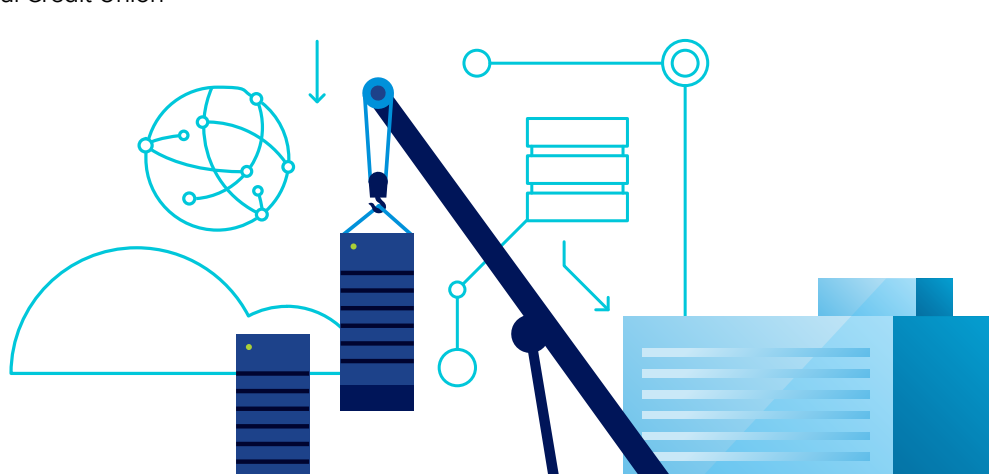

6% higher net developer productivity³

“VCF and Private AI Foundation allowed us to quickly and efficiently implement AI technologies in our applications in a secure manner, whether it’s for knowledge-based chatbots assisting staff or delivering financial answers directly to our members across multiple devices. It helped us automate everyday transactions, streamline loan processing, and proactively identify member needs.”

Mark Fournier
CIO, U.S. Senate Federal Credit Union

“We are transitioning all our software to modern, containerized apps. With VMware, we have progressed quickly on that journey, and transforming our software has helped us become a more agile business moving in the direction consumers want.”

Vishwas Chitale
CEO and CTO, Chitale Dairy
