Steps to

# Running Apps with Better Network Visibility

Get up and running in five simple steps

The Data Center Assessment Dashboard and Report provides a quick overview of how networking with VMware NSX can help run business applications better.

1

## Run a VMware Cloud Foundation Network Assessment

Run an Assessment with VMware Cloud Foundation Network Operations (VMware Aria Operations for Networks) to understand your real application network traffic in your environment.

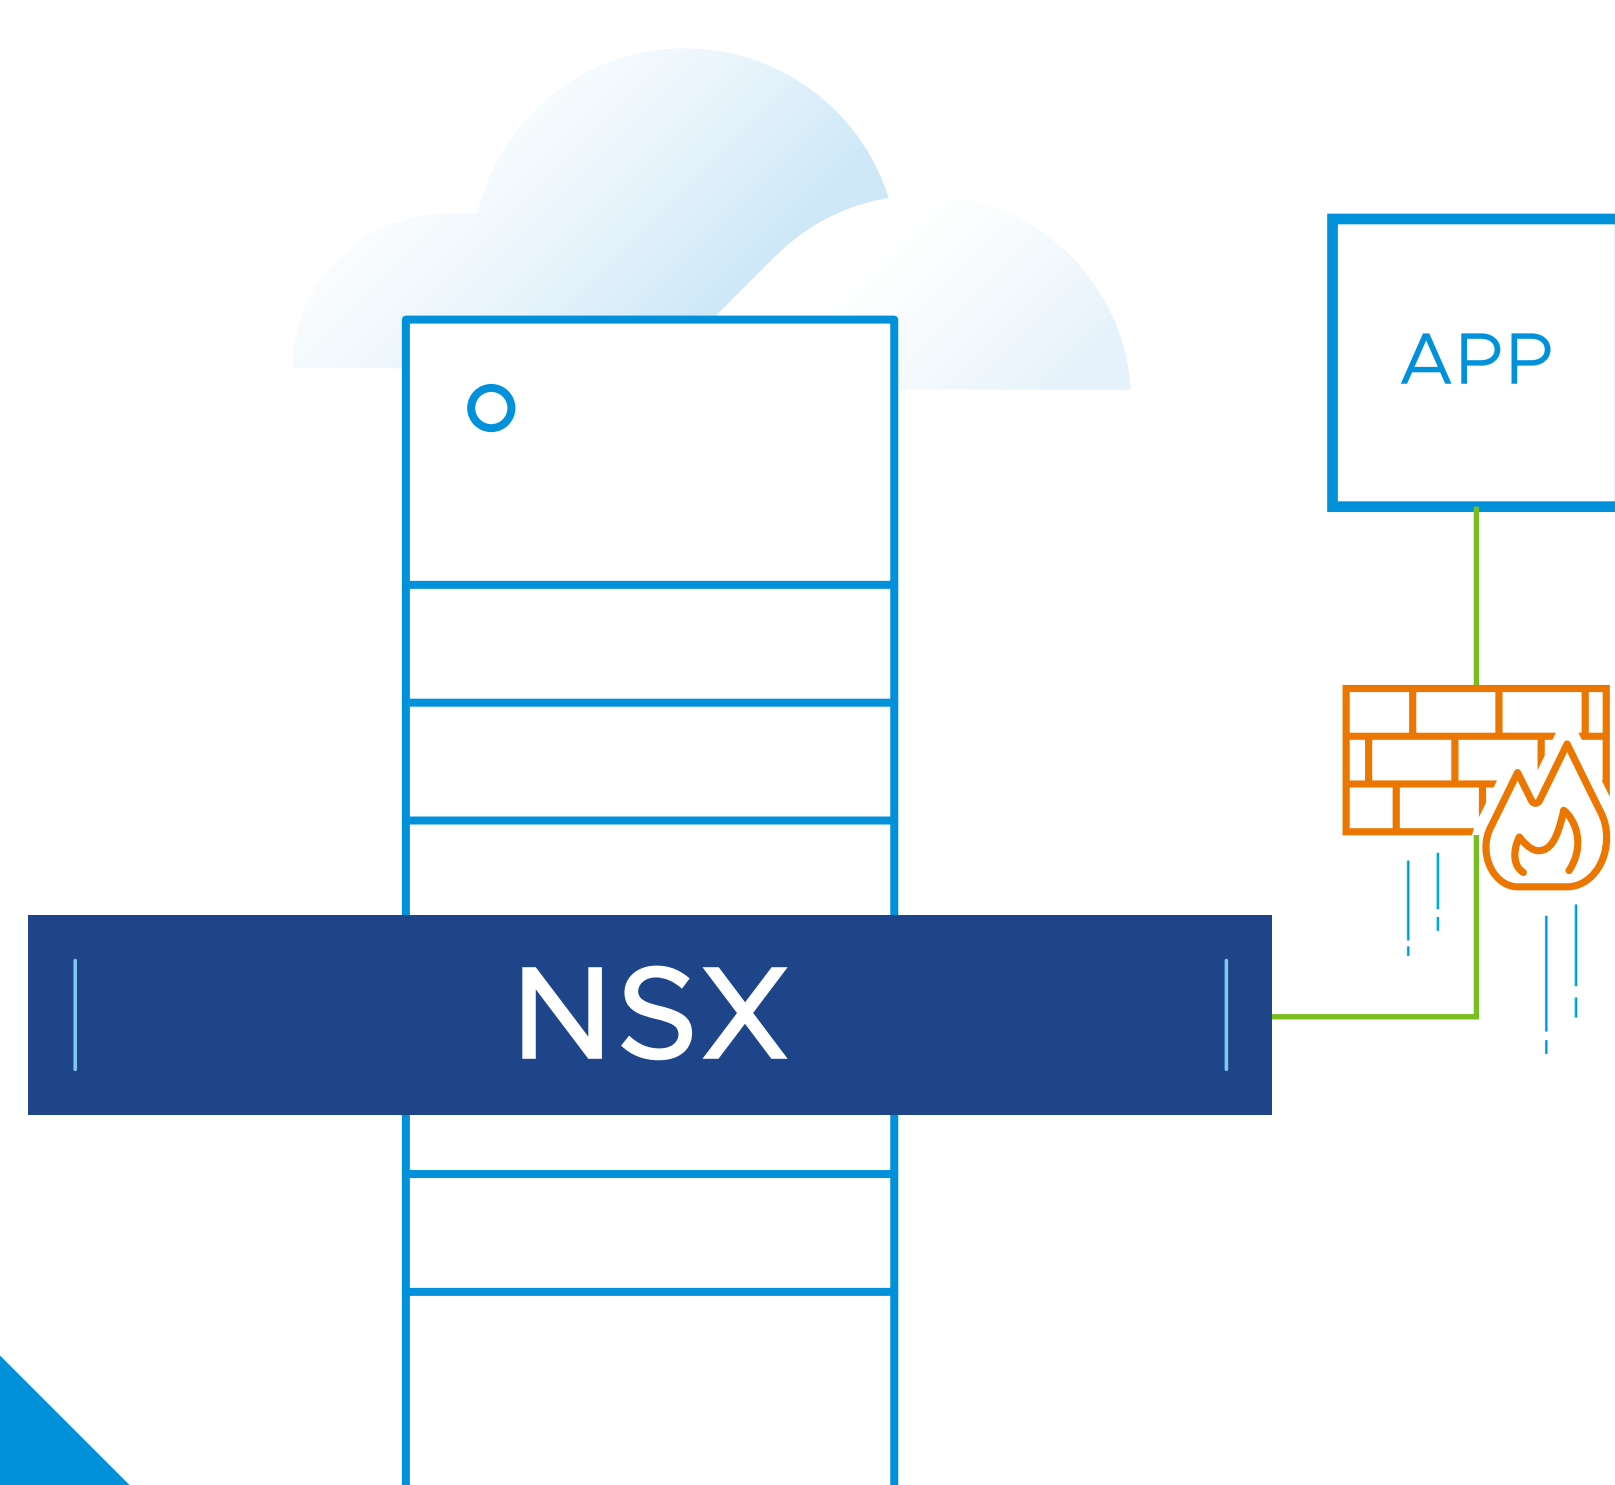

Offer data-driven decision-making

2

## Enable Netflow

Enabling Netflow/IPFIX on the vCenter Virtual Distributed Switch (VDS) allows the richer dashboard of network traffic

Enhance application traffic!

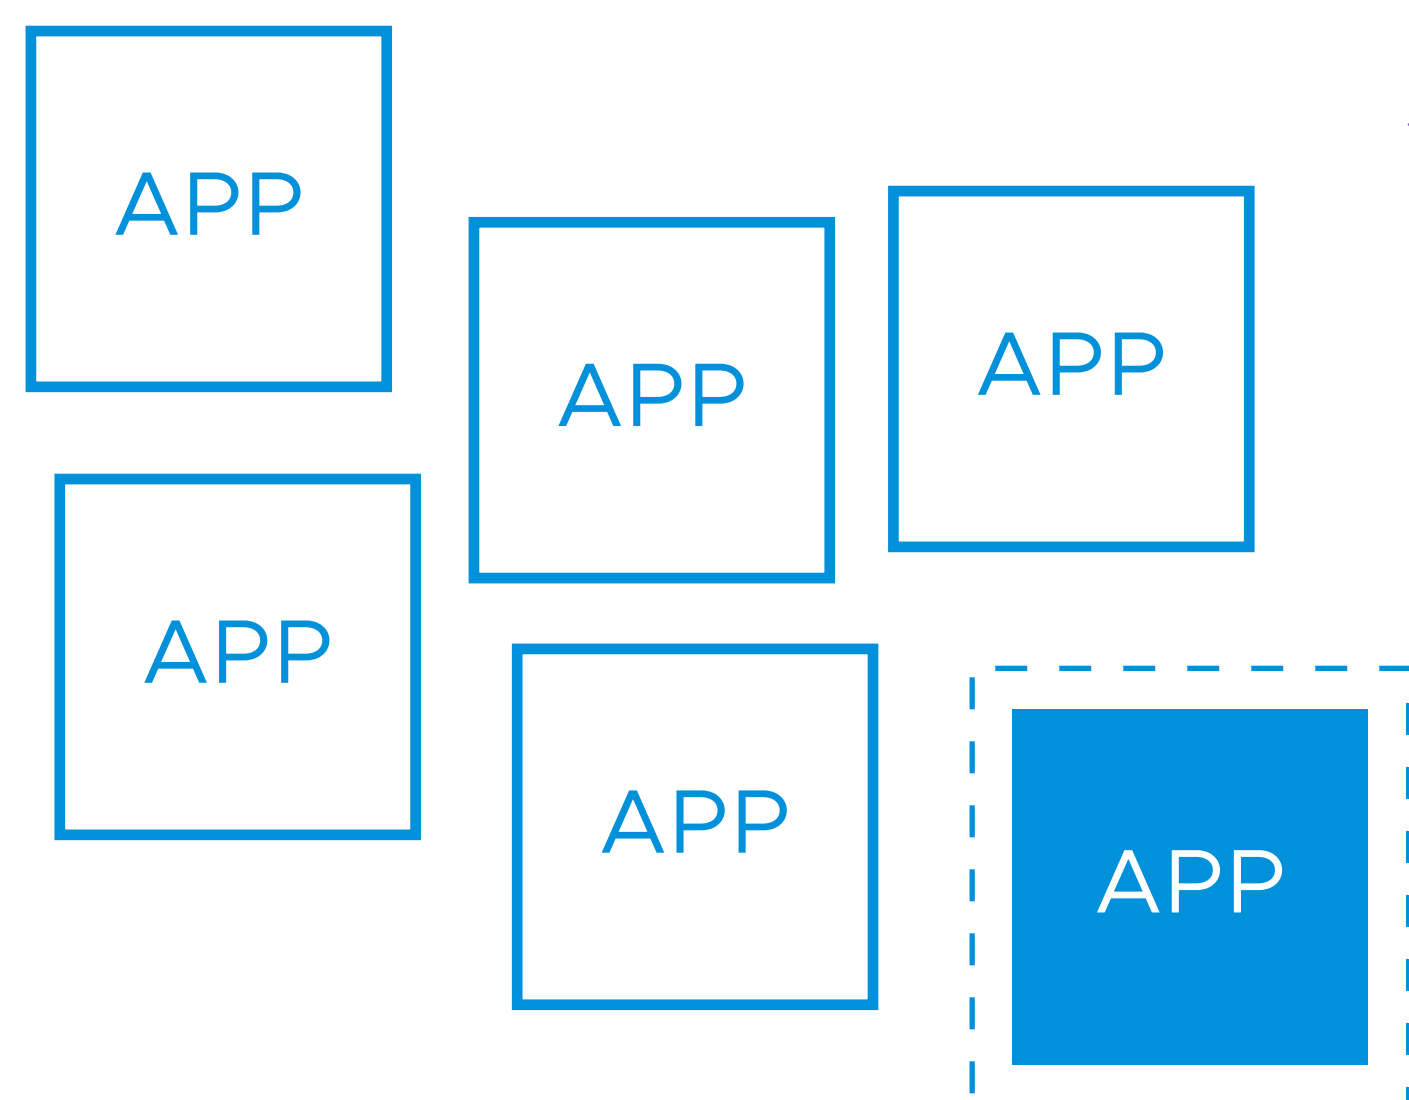

3

## Identify Application Traffic

Use the dashboard and report to show total traffic, east-west traffic, and traffic categorized as routed, hair-pinned, switched, or other

Details on the top talkers among virtual machines

4

## Analyze Application Traffic

View across applications. Continue to monitor and troubleshoot network flows

Look for ways to improve performance!

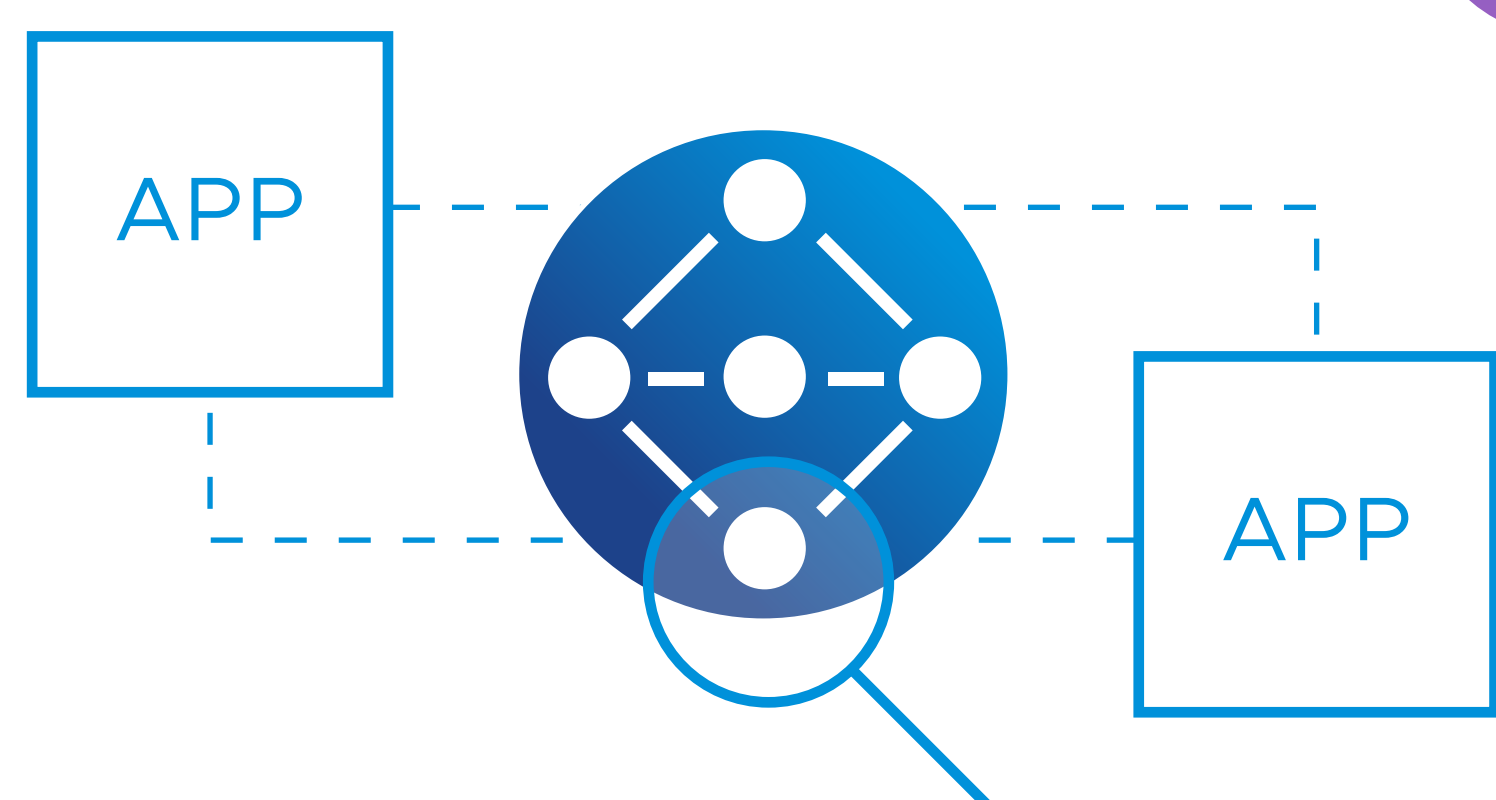

VMware Cloud Foundation™

5

## Deploy VMware NSX

Use VMware NSX. No changes to your existing infrastructure required.

Network done!
