ESA Auto-Policy Management one-click remediation	Management																	x
ESA Prescriptive disk claim	Management																	x
ESA Deep Rekey operation for clusters using Encryption	Security & Integrity																	x
ESA Support for VMware Cloud Foundation (VCF)	Management																	x
Support for key expiration attribute by key providers	Security & Integrity															x	x	x
Top Contributors and hotspot detection	Management															x	x	x
I/O-Trip Analyzer for Stretched clusters	Health & Diagnostics															x	x	x
vSAN Witness traffic tagging in User Interface	Management															x	x	x
Disaggregation using vSAN Max Storage Clusters*5	Disaggregation																	x

*1 = Not available in intial releases of the vSAN ESA
*2 = Does not support two cross-cluster capacity sharing capabilities in OSA version of vSAN 8 U1
*3 = Durability components supported when using RAID-5/6 erasure coding
*4 = Replaced with vSAN Max which provides Storage-only clusters to vSphere clusters
*5 = Not a feature of vSAN. vSAN Max is a new offering within the vSAN family licensed separately from existing vSAN editions.

The listing of vSAN Max in this matrix is to simply convey that it was introduced in the vSAN 8 U2 code base. The new vSAN Max offering will be licensed separately from existing vSAN editions, and **is not** a part of the purchase of vSAN licensing (e.g. vSAN Advance, vSAN Enterprise, etc.). vSAN Max will be offered as a subscription and planned to be licensed on a per tebibyte metric. A seperate vSAN Max feature matrix will be created at a later time. For the most up to date vSAN Max pricing and packaging, please view the vSAN Licensing Guide
