## Overview

This document provides information about configuring SAML-based single sign-on from the VMware Identity Manager service to Compass.

Compass offers data solutions for industries through online and offline applications.

When Compass is configured in the VMware Identity Manager catalog, users can sign in to Compass from their VMware Identity Manager apps portal.

You must have an administrator account for the VMware Identity Manager service to configure Compass. You work with your Compass representative to configure VMware Identity Manager for single sign-on in the Compass server.

## Adding Compass to VMware Identity Manager Catalog

To enable single sign-on to Compass on the service, you must configure the app in the catalog.

### Add Compass to the Catalog

#### Prerequisite

- Your Compass organization audience name.
1. Log in to the VMware Identity Manager administration console.
  2. In the **Catalog** page, click **Add Application > ...from the cloud application catalog**.
  3. Click the **Compass** icon.
  4. Click **Configuration**. The Configuration page is preconfigured as follows.

FIELD	CONFIGURED VALUE
Launch URL	Automatically populated with your launch URL.
RelayState	
Proxy Count	
LoginRedirection URL	
Include Destination	Enabled
Sign Response	Enabled
Sign Assertion	
Include Cert	

<b>Signature Algorithm</b>	SHA1 with RSA
<b>Digest Algorithm</b>	SHA1
<b>Allow API Access</b>	
<b>Assertion Consumer Service *</b>	Automatically populated with the URL where the SAML is posted. <b>https://compass- sso.{CompanyName}.com/saml2/sp/acs/post</b>
<b>Name ID Format</b>	Unspecified (username)
<b>Name ID Value</b>	Custom value \${user.userName}
<b>Recipient Name *</b>	The SP' assertion consumer service URL populated as <b>https://compass- sso.{CompanyName}.com/saml2/sp/acs/post</b>
<b>Audience *</b>	The SP's unique identifier populated as <b>{Audience}</b>
<b>Assertion Lifetime</b>	Populated with a value of 200 seconds.
<b>Signing Certificate</b>	
<b>Application Parameters</b>	For CompanyName, add the organization name that is configured with Compass. For example, if your Compass URL is <b>https://compass-sso.act.com</b> , set the CompanyName value as <b>act</b> .  Add your Compass organization audience value.
<b>Attribute Mapping</b>	

5. Click **Save**.

## Download SAML-Signing Certificate

If the SAML-signing certificate from the VMware Identity Manager service is required for the Compass configuration, you can retrieve the certificate from the Catalog > Settings tab.

1. In the **Catalog > Settings** tab, click **SAML Metadata**.

Copy and save the **Signing Certificate** text as a **.pem** file on your computer. Make sure that you include text from -----BEGIN CERTIFICATE---- through -----END CERTIFICATE-----.

### Download SAML Certificate

This is your organization's SAML-signing certificate. It is used to authenticate logins from Workspace to relying applications, such as WebEx or Google Apps. Copy and paste the certificate below and send it to the relying applications so they can accept logins from Workspace.

For integrating with other relying applications utilizing SAML 2.0, you can also use the metadata URLs below.

SAML Metadata [Identity Provider \(IdP\) metadata](#)  
[Service Provider \(SP\) metadata](#)

Expires: January 30, 2025

Issuer: CN=Horizon SAML Self-Signed Certificate,O=DEMO,C=US

## Setting up Identity Manager in Compass

Contact the Compass application support team to set up single sign-on for VMware Identity Manager. You might require the following information.

- Your identity manager domain name
- VMware Identity Manager SAML signing certificate

## Testing Single Sign-on Configuration

Test your single sign-on configuration with a small number of users before deploying the application across your organization.

### Set up User in VMware Identity Manager for Testing

1. Log in to the VMware Identity Manager administration console.
2. In the **Users & Groups** page, click **Users** and ensure that the user you are testing is in the list of users.
3. In the **Catalog** page, click on the Compass application.
4. Click **Entitlements**.
5. Click **+Add user entitlement**.
6. Select the test user and change the **DEPLOYMENT** field value for the user to **Automatic**. For example:

#### Add User Entitlement

or browse...

User, Demo (demo)	Automatic	Remove
-------------------	-----------	--------

7. Click **Save**, then click **Done**.
8. In the top-right corner of the page, click your user name and select **Logout**.

## Set up a User in Compass for Testing

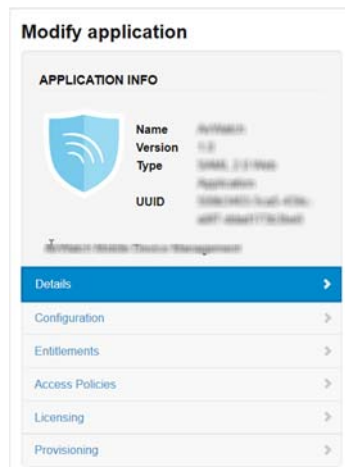

Make sure the test user you set up in VMware Identity Manager is configured in Compass.

## Verify Test-User can Sign into Compass

1. Sign in to the user portal as the test user.
  2. Click the Compass icon on the My Apps page.
- You should now have single sign-on access to Compass.

## Completing the Configuration in the Catalog

In addition to configuring the Web application for single sign-on to the service, you can configure additional settings to add an access policy, set up external approval requirements, and entitle users and groups to the app.

**Entitlements** After you configure a Web application, you can add group entitlements and entitle individual users to the Web app.

**Access Policies** The VMware Identity Manager service includes a default policy that is automatically assigned to the Web app when you add the app to the Catalog. If you do not want to use the default access policy, create a new access policy and in the Access Policies link, select the access policy to use for this Web application.

For example, you can create a stricter policy than the default, with rules that specify which IP addresses have access to the application, using which authentication methods, and for how long until reauthentication is required. See the VMware Identity Manager documentation at <http://pubs.vmware.com>.

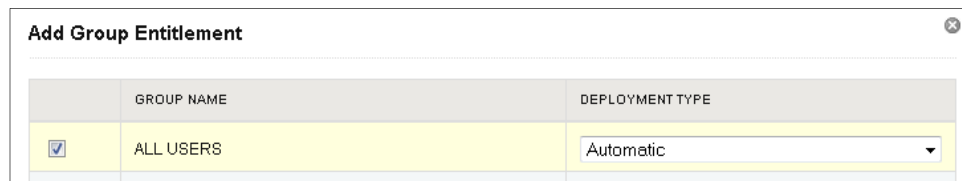

**Licensing** In some applications, licensing can be used to require users to request external approval before they can access the application. In addition, you

can add additional information, including pricing, license type, cost per license and the number of licenses. You can run the Resource Usage report to see the approval information for the application.

## Entitle Users to Compass

You can activate single sign-on for all users.

1. Log in to the VMware Identity Manager administration console.
2. In the **Catalog** page, click Compass.
3. In the **Modify application** page, click **Entitlements**.
4. Click **+Add group entitlement**.
5. Select **ALL USERS** and change the DEPLOYMENT TYPE value to **Automatic**.

	GROUP NAME	DEPLOYMENT TYPE
<input checked="" type="checkbox"/>	ALL USERS	Automatic

6. Click **Save**, then click **Done**.
