Overview

This document provides information about configuring SAML-based single sign-on from the VMware Identity Manager service to MangoApps.

MangoApps is employee collaboration software that includes Intranet, messaging, and collaboration tools.

You add MangoApps to the VMware Identity Manager catalog and enable SAML authentication in MangoApps to allow users logged into the service to have single sign-on access to MangoApps.

You must have an administrator account for the VMware Identity Manager service, as well as an administrator account for MangoApps.

Adding MangoApps to VMware Identity Manager Catalog

To enable single sign-on to MangoApps on the service, you must configure the application in the catalog and copy the SAML- signing certificate to MangoApps.

Add MangoApps to the Catalog

1. Log in to the VMware Identity Manager administration console.
2. In the **Catalog** page, click **Add Application > ...from the cloud application catalog**.
3. Click the **MangoApps** icon.

The Modify application page appears.

4. Select **Configuration** in the left pane.
5. In the **Application Parameters** section, set the value of the **subdomain** parameter to the subdomain used for your organization's MangoApps account. For example, if your MangoApps URL is `https://myco.mangoapps.com`, set the value to **myco**.

For example:

Application Parameters			
You can map these attributes to specific user profile values.			
NAME	DESCRIPTION	DEFAULT VALUE	VALUE
subdomain	Your org's MangoApps subdomain		myco

6. Click **Save**.
Verify that the Application Configuration page is similar to this example.

Application Configuration

Launch URL

RelayState

Proxy Count

Login Redirection URL

Include Destination Include the destination in the response (recommended)

Sign Response Sign the entire response (recommended)

Sign Assertion Sign the assertion

Include Cert Include the signing certificate in the response.

Allow API Access Allow API access to this application.

Configure Via [Auto-discovery \(the default\)](#) | [Metadata XML](#) | [Manual configuration](#)

Assertion Consumer Service
URL the SAML should be posted to

Name ID Format
How to send the user identifier

Name ID Value Selection suggestions
 Custom value

Recipient Name
The SP's assertion consumer service URL.

Audience
The SP's unique identifier.

Assertion Lifetime
How many seconds the SAML will be valid for (default: 200)

Signing Certificate

Application Parameters

You can map these attributes to specific user profile values.

NAME	DESCRIPTION	DEFAULT VALUE	VALUE
<input type="text" value="subdomain"/>	<input type="text" value="Your org's MangoApps subdomain"/>	<input type="text"/>	<input type="text" value="myco"/>

Attribute Mapping

You can map these attributes to specific user profile values.

NAME	FORMAT	EXPRESSION	VALUE
<input type="text"/>	<input type="text" value="Basic"/> <input type="button" value="v"/>	<input type="text"/>	<input type="text" value="Expression as #L2 or Value"/> <input type="button" value="v"/>

Download SAML-Signing Certificate

You must have the SAML-signing certificate from the VMware Identity Manager service for the MangoApps configuration.

1. In the **Catalog > Settings** tab, click **SAML Metadata**.
2. Copy and save the **Signing Certificate** text to a text file on your computer. Make sure that you include text from -----BEGIN CERTIFICATE----- through -----END CERTIFICATE-----.

Download SAML Certificate

This is your organization's SAML-signing certificate. It is used to authenticate logins from Workspace to relying applications, such as WebEx or Google Apps. Copy and paste the certificate below and send it to the relying applications so they can accept logins from Workspace.

For integrating with other relying applications utilizing SAML 2.0, you can also use the metadata URLs below.

SAML Metadata [Identity Provider \(IdP\) metadata](#)
[Service Provider \(SP\) metadata](#)

Expires: January 30, 2025

Issuer: CN=Horizon SAML Self-Signed Certificate,O=DEMO,C=US

Setting up MangoApps

To configure MangoApps for single sign-on from the service, you set up single-sign on in MangoApps and upload the VMware Identity Manager SAML-signing certificate.

Configure MangoApps

1. Log in to MangoApps as administrator.
2. Click **Admin** on the top-right of the page.
3. Click the **Integration** icon  on the toolbar at the left of the page.
4. Click **Single Sign On**.
5. Click the **SAML** tab.
6. Enter the following information.

OPTION	VALUE
Allow SAML based federated login for the domain?	Select this checkbox.
Provider	Select Other SAML Providers .
Issuer URL (HTTPS)	Enter the VMware Identity Manager identity provider SAML metadata URL that you copied. For example: https://myco.vmwareidentity.com/SAAS/API/1.0/GET/metadata/idp.xml
SAML 2.0 Endpoint (HTTPS)	Enter the VMware Identity Manager single sign-on URL in the following format: https://myco.vmwareidentity.com/SAAS/auth/federation/sso Replace <i>myco.vmwareidentity.com</i> with your company's VMware Identity Manager service domain name.
Remote Logout URL (HTTPS)	Enter your VMware Identity Manager logout URL. If you want the logout URL to return users to the VMware Identity Manager service, enter your logout URL in the following format: https://myco.vmwareidentity.com
X.509 Certificate	Paste the SAML-signing certificate you copied from the VMware Identity Manager administration console.

For example:

7. Click **Save**.

A **SAML credentials successfully saved** confirmation message appears in the blue bar at the top of the page.

Testing Single Sign-on Configuration

Test your single sign-on configuration with a small number of users before deploying the application across your organization.

Set up User in VMware Identity Manager for Testing

1. Log in to the VMware Identity Manager administration console.
2. In the **Users & Groups** page, click **Users** and ensure that the user you are testing is in the list of users.
3. In the **Catalog** page, click **MangoApps**.
4. Click **Entitlements**.
5. Click **+Add user entitlement**.
6. Select the test user and change the **DEPLOYMENT** field value for the user to **Automatic**. For example:

7. Click **Save**, then click **Done**.
8. In the top-right corner of the page, click your user name and select **Logout**.

Set up User in MangoApps for Testing

1. Sign in to the MangoApps site as administrator.
2. Click the **Users** icon  on the toolbar at the left of the page.
3. Click **Invite Users** in the left pane.

4. Enter the user information and send the invitation.

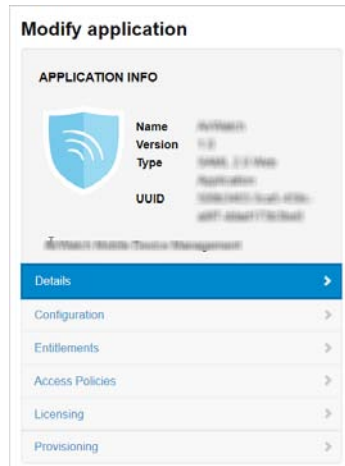

Next, verify that the test user can sign in to the My Apps portal.

Verify Test-User can Sign into MangoApps

1. Sign in to the user portal as the test user.
2. Click the **MangoApps** icon on the My Apps page.
You should now have single sign-on access to MangoApps.

Completing the Configuration in the Catalog

In addition to configuring the Web application for single sign-on to the service, you can configure additional settings to add an access policy, set up app licensing requirements, and entitle users and groups to the application.

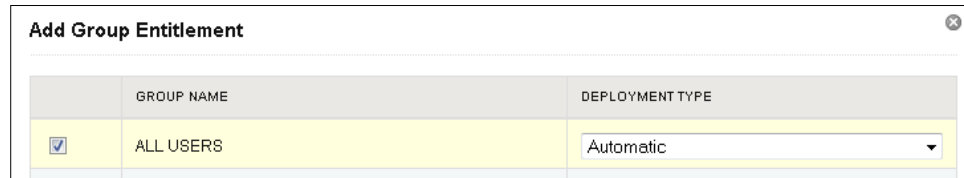

- Entitlements** After you configure a Web application, you can add group entitlements and entitle individual users to the Web application.
- Access Policies** The VMware Identity Manager service includes a default policy that is automatically assigned to the Web app when you add the app to the Catalog. If you do not want to use the default access policy, create a new access policy and in the Access Policies link, select the access policy to use for this Web application.
- For example, you can create a stricter policy than the default, with rules that specify which IP addresses have access to the application, using which authentication methods, and for how long until reauthentication is required. See the VMware Identity Manager documentation at <http://pubs.vmware.com>.
- Licensing** Licensing can be used to require users to request license approval before they can access the application. You can add additional information, including pricing, license type, cost per license and the number of licenses. You can run the Resource Usage report to see the licensing information for the application.
- Provisioning** Provisioning provides automatic application user-management from a single location. Provisioning adapters allow the Web application to retrieve specific information from VMware Identity Manager, as required. The provisioning adapters that can be selected are either Google Apps, Mozy, or Vchs. If you configure these applications, you can select the appropriate provisioning adapter.

Entitle Users to MangoApps

You can activate single sign-on for all users. Before you do so, ensure that all the user accounts are provisioned in MangoApps.

1. Log in to the VMware Identity Manager administration console.
2. In the **Catalog** page, click **MangoApps**.

3. In the **Modify application** page, click **Entitlements**.
4. Click **+Add group entitlement**.
5. Select **ALL USERS** and change the **DEPLOYMENT TYPE** field value to **Automatic**.

	GROUP NAME	DEPLOYMENT TYPE
<input checked="" type="checkbox"/>	ALL USERS	Automatic

6. Click **Save**, then click **Done**.
